## FEATURES

Fixed gain of $\mathbf{2 0 ~ d B}$
Operation up to 500 MHz
+41.8 dBm OIP3 at 70 MHz
Noise Figure $\mathbf{2 . 5 ~ d B ~ a t ~} \mathbf{7 0 ~ M H z}$
Temperature and power supply stable
Power supply: 5 V
Power supply current: 90 mA per amplifier
1000 V ESD (Class 1C)

## GENERAL DESCRIPTION

The ADL5534 contains two broadband, fixed-gain, linear amplifiers in an $4 \times 4 \mathrm{~mm}$ LFCSP package and operates at frequencies up to 500 MHz . The device can be used in a wide variety of wired and wireless devices including cellular, GSM and WCDMA, and broadband applications.

The ADL5534 has a fixed gain 20 dB and is stable over frequency, temperature, power supply and from device to device. It achieves an OIP3 of 41.8 dBm with an output compression point of +20.2 dBm and a noise figure of 2.5 dB . The ADL5534 is single-ended and internally matched to $50 \Omega$ with an input return loss of 10 dB . Only input/output ac-
coupling capacitors, a power supply decoupling capacitor and external inductor are required for operation.

This IF amplifier operates with supply voltage of +5 V , consuming 90 mA of supply current per amplifier.

Fabricated on a GaAs HBT process and has an ESD rating of 1000 V (Class 1C). The device is packaged in a $4 \mathrm{~mm} \times 4 \mathrm{~mm}$ LFCSP that uses an exposed paddle for excellent thermal impedance and operates from $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$. A fully populated evaluation board is available.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD CAUTION

|  | ESD (electrostatic discharge) sensitive device. <br> Charged devices and circuit boards can discharge <br> without detection. Although this product features <br> patented or proprietary protection circuitry, damage <br> may occur on devices subjected to high energy ESD. <br> Therefore, proper ESD precautions should be taken to <br> avoid performance degradation or loss of functionality. |

## Preliminary Technical Data

## EVALUATION BOARD

Figure 6 shows the schematic for the ADL5531 evaluation board. The board is powered by a single 5 V supply. The components used on the board are listed in. Table 4Applying 5V to Vpos will bias the amplifier corresponding to RFIN1 RFOUT2. Applying 5 V toVpos1 will bias the amplifier
corresponding to RFIN2 - RFOUT2 To bias both amplifiers from a single supply, connect 5 V to Vpos or Vpos1 and attach a jumper across W3
