SEMICONDUCTOR®

74VHCU04 Hex Inverter

General Description

The VHCU04 is an advanced high speed CMOS Inverter fabricated with silicon gate CMOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

Since the internal circuit is composed of a single stage inverter, it can be used in analog applications such as crystal oscillators. An input protection circuit ensures that 0V to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery backup. This circuit prevents device destruction due to mismatched supply and input voltages.

Features

- High Speed: t_{PD} = 3.5 ns (typ) at V_{CC} = 5V
- \blacksquare Low Power Dissipation: I_{CC} = 2 μA (Max) @ T_A = 25°C

July 1993

Revised February 2005

- High Noise Immunity: $V_{NIH} = V_{NIL} = 28\% V_{CC}$ (Min)
- Power down protection is provided on all inputs
- Low Noise: V_{OLP} = 0.8V (Max)
- Pin and Function Compatible with 74HCU04

Ordering Code:

Package Number	Package Description						
M14A	14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow						
M14A	Pb-Free 14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow						
M14D	Pb-Free 14-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide						
MTC14	14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide						
MTC14	Pb-Free 14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide						
N14A	14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide						
	Number M14A M14A M14A M14D MTC14 MTC14						

Pb-Free package per JEDEC J-STD-020B.

Note 1: "_NL" indicates Pb-Free package (per JEDEC J-STD-020B). Device available in Tape and Reel only.

 -40°C to +85°C

 ±25 mA
 Note 2: Absolute Maximum Ratings are values beyond which the device

±50 mA may be damaged or have its useful life impaired. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation outside databook specifications.

260 °C Note 3: Unused inputs must be held HIGH or LOW. They may not float.
