

### ■ Features :

- DC input active surge current limiting
- Wide 4:1~2:1 DC input range (24V: 19~72VDC, 96V:72~144VDC)
- Protections: Short circuit / Overload / Over voltage / Over temperature / Input polarity (by fuse)
- 2000VAC I/O Isolation
- Forced air cooling by built-in DC fan with fan speed control function
- Output OK Signal
- Built-in remote ON-OFF control
- Built-in remote sense function
- 3 years warranty

**CB CE**

| NOTE                  | <p>1. All parameters NOT specially mentioned are measured at 48, 96VDC input, rated load and 25°C of ambient temperature.</p> <p>2. Ripple &amp; noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf &amp; 47uf parallel capacitor.</p> <p>3. Tolerance : includes set up tolerance, line regulation and load regulation.</p> <p>4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on <a href="http://www.meanwell.com">http://www.meanwell.com</a>)</p> <p>5. Derating may be needed under low input voltages. Please check the derating curve for more details.</p> |  |              |            |                 |              |           |

**Mechanical Specification**

**Static Characteristics**

■ **Function Description of CN3**

| Pin No. | Function | Description   |
|---------|----------|---|
| 1       | +S       | Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. |
| 2       | -S       | Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. |
| 3       | O/P OK   | Open collector signal, reference to pin4(GND). Low when PSU turns on. The maximum sink current is 10mA and the maximum external voltage is 13V.   |
| 4       | GND      | These pins connect to the negative terminal (-V).   |
| 5       | RC       | Remote ON/OFF   |
| 6       | RCG      | Remote ON/OFF ground  |

■ **Function Manual**

**1.Remote ON/OFF**

- (1) Remote ON/OFF control becomes available by applying voltage in CN3
- (2) Table 1.1 shows the specification of Remote ON/OFF function
- (3) Fig.1.2 shows the example to connect Remote ON/OFF control function

Table 1.1 Specification of Remote ON/OFF

| Connection Method | Fig. 1.2(A) | Fig. 1.2(B) |
|-------------------|-------------|-------------|
| Output on         | SW Open     | V=0~0.8Vdc  |
| Output off        | SW Close    | V=4~10Vdc   |

Fig.1.2 Examples of connecting remote ON/OFF

(A) Using external voltage source

(B) Using external voltage source

**2.Output OK signal**

"Output OK" is an open collector signal. It indicates the output status of the PSU. It can operate in two ways : One is sinking current from external signal ; the other is sending out a voltage signal.

**2-1 Sink current :**

The maximum sink current is 10mA and the maximum external voltage is 13V.

**2-2 Voltage signal :**

| Between O/P OK(pin3) and GND(pin4) | Output Status |
|------------------------------------|---------------|
| 0 ~ 0.5V                           | ON            |
| 12 ~ 13V                           | OFF           |

| 1  | CN3    | 5   |
|----|--------|-----|
| +S | O/P OK | RC  |
| -S | GND    | RCG |
| 2  |        | 6   |

**3.Remote Sense**

The remote sensing compensates voltage drop on the load wiring up to 0.5V.

|    |        |     |
|----|--------|-----|
| 1  | CN3    | 5   |
| +S | O/P OK | RC  |
| -S | GND    | RCG |
| 2  |        | 6   |
