.2SB507,2SB508 and 2SD313,2SD314 are complementary pairs respectively.
 .These are designed for the output stage of 15W to 25W AF power amplifier.
 .2SB507 and 2SB508, or 2SD313 and 2SD314, differ from their care outlines only.

() shows the case of 2SB507, 2SB508 only.

Output Noise Voltage	VNO	2.2kohm terminated	0.3 mV
Output Center Voltage	VN		0±30 mV

(Under the condition of AC 100V, transformer driven.)

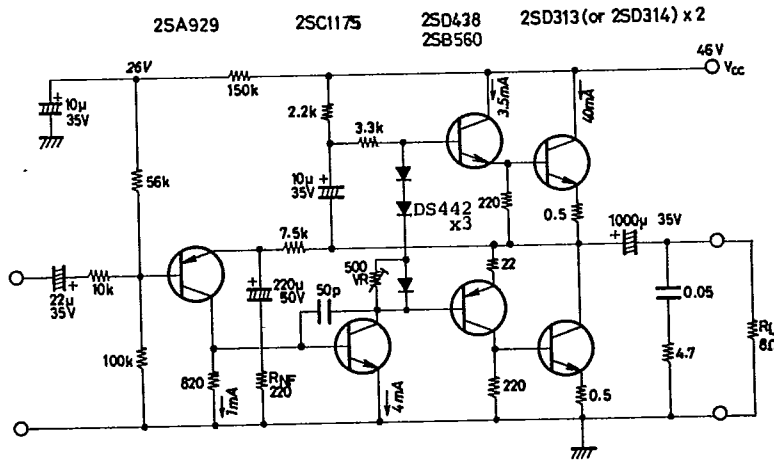

Circuit Configuration

Differential amplifier for first stage. Voltage regulator for rejecting of click noise at switching-on time. Darlington output stage of 2SB507/2SD313. High input impedance of 100 kohm by bootstrap circuit. This input impedance can be varied by varying this input resistor. In order to suppress oscillation, 30pF between base and collector, and 4.7ohm/0.04uF in parallel with RL of output are available. Nevertheless frequency response is -2dB at 100kHz. In emitter of differential amplifier of first stage 500 ohm variable resistor makes output center voltage to zero whatever hFE rank used.

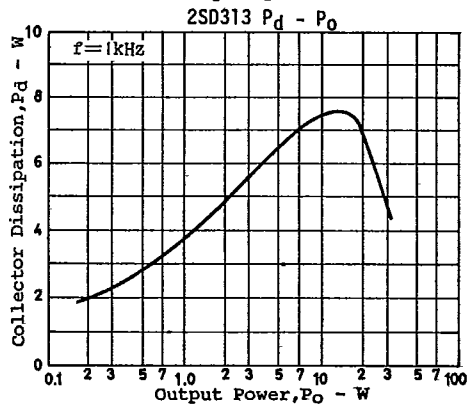

Application 2 20W AF Power Amplifier Using 2SD313(2SD314)x2.
