4-BIT RIGHT/LEFT SHIFT REGISTER

DESCRIPTION — The '95 is a 4-bit shift register with serial and parallel synchronous operating modes. The serial shift right and parallel load are activated by separate clock inputs which are selected by a mode control input. The data is transferred from the serial or parallel D inputs to the Q outputs synchronous with the HIGH-to-LOW transition of the appropriate clock input.

- SYNCHRONOUS, EXPANDABLE SHIFT RIGHT
- SYNCHRONOUS SHIFT LEFT CAPABILITY
- SYNCHRONOUS PARALLEL LOAD
- SEPARATE SHIFT AND LOAD CLOCK INPUTS

FUNCTIONAL DESCRIPTION — The '95 is a 4-bit shift register with serial and parallel synchronous operating modes. It has a Serial (D_S) and four Parallel ($P_0 - P_3$) Data inputs and four Parallel Data outputs ($Q_0 - Q_3$). The serial or parallel mode of operation is controlled by a Parallel Enable input (PE) and two Clock inputs, \overline{CP}_1 and \overline{CP}_2 . The serial (right-shift) or parallel data transfers occur synchronous with the HIGH-to-LOW transition of the selected clock input.

When PE is HIGH, \overline{CP}_2 is enabled. A HIGH-to-LOW transition on enabled \overline{CP}_2 transfers parallel data from the $P_0 - P_3$ inputs to the $Q_0 - Q_3$ outputs. When PE is LOW, \overline{CP}_1 is enabled. A HIGH-to-LOW transition on enabled \overline{CP}_1 transfers the data from Serial input (D_S) to Q_0 and shifts the data in Q_0 to Q_1 , Q_1 to Q_2 , and Q_2 to Q_3 respectively (right-shift). A left-shift is accomplished by externally connecting Q_3 to P_2 , Q_2 to P_1 , and Q_1 to P_0 , and operating the '95 in the parallel mode (PE = HIGH). For normal operation, PE should only change states when both Clock inputs are LOW. However, changing PE from LOW to HIGH while \overline{CP}_2 is HIGH, or changing PE from HIGH to LOW while \overline{CP}_1 is HIGH and \overline{CP}_2 is LOW will not cause any changes on the register outputs.

l = LOW Voltage Level one set-up time prior to the HIGH-to-LOW clock transition.
 h = HIGH Voltage Level one set-up time prior to the HIGH-to-LOW clock transition.
 p_n = Lower case letters indicate the state of the referenced input (or output) one set-up time prior to the HIGH-to-LOW clock transition.

H = HIGH Voltage Level
 L = LOW Voltage Level
 X = Immaterial
