

DECADE COUNTER; 4-BIT BINARY COUNTER

The SN54/74LS290 and SN54/74LS293 are high-speed 4-bit ripple type counters partitioned into two sections. Each counter has a divide-by-two section and either a divide-by-five (LS290) or divide-by-eight (LS293) section which are triggered by a HIGH-to-LOW transition on the clock inputs. Each section can be used separately or tied together (Q to CP) to form BCD, Bi-quinary, or Modulo-16 counters. Both of the counters have a 2-input gated Master Reset (Clear), and the LS290 also has a 2-input gated Master Set (Preset 9).

- Corner Power Pin Versions of the LS90 and LS93
- Low Power Consumption . . . Typically 45 mW
- High Count Rates . . . Typically 42 MHz
- Choice of Counting Modes . . . BCD, Bi-Quinary, Binary
- Input Clamp Diodes Limit High Speed Termination Effects

CONNECTION DIAGRAM DIP (TOP VIEW)

NOTE:
The Flatpak version has the same pinouts (Connection Diagram) as the Dual In-Line Package.

PIN NAMES

CP ₀	Clock (Active LOW going edge) Input to +2 Section.
CP ₁	Clock (Active LOW going edge) Input to +5 Section (LS290).
CP ₁	Clock (Active LOW going edge) Input to +8 Section (LS293).
MR1, MR2	Master Reset (Clear) Inputs
MS1, MS2	Master Set (Preset-9, LS290) Inputs
Q ₀	Output from +2 Section (Notes b & c)
Q ₁ , Q ₂ , Q ₃	Outputs from +5 & +8 Sections (Note b)

NOTES:

- a) 1 TTL Unit Load (U.L.) = 40 μA HIGH/1.6 mA LOW.
 b) The Output LOW drive factor is 2.5 U.L. for Military (54) and 5 U.L. for Commercial (74) Temperature Ranges.
 c) The Q₀ Outputs are guaranteed to drive the full fan-out plus the CP₁ Input of the device.

FUNCTIONAL DESCRIPTION

The LS290 and LS293 are 4-bit ripple type Decade, and 4-Bit Binary counters respectively. Each device consists of four master/slave flip-flops which are internally connected to provide a divide-by-two section and a divide-by-five (LS290) or divide-by-eight (LS293) section. Each section has a separate clock input which initiates state changes of the counter on the HIGH-to-LOW clock transition. State changes of the Q outputs do not occur simultaneously because of internal ripple delays. Therefore, decoded output signals are subject to decoding spikes and should not be used for clocks or strobes. The Q₀ output of each device is designed and specified to drive the rated fan-out plus the CP₁ input of the device.

A gated AND asynchronous Master Reset (MR₁ · MR₂) is provided on both counters which overrides the clocks and resets (clears) all the flip-flops. A gated AND asynchronous Master Set (MS₁ · MS₂) is provided on the LS290 which overrides the clocks and the MR inputs and sets the outputs to nine (HLLH).

Since the output from the divide-by-two section is not internally connected to the succeeding stages, the devices may be operated in various counting modes:

LS290

A. BCD Decade (8421) Counter — the CP₁ input must be

externally connected to the Q₀ output. The CP₀ input receives the incoming count and a BCD count sequence is produced.

- B. Symmetrical Bi-quinary Divide-By-Ten Counter — The Q₃ output must be externally connected to the CP₀ input. The input count is then applied to the CP₁ input and a divide-by-ten square wave is obtained at output Q₀.
- C. Divide-By-Two and Divide-By-Five Counter — No external interconnections are required. The first flip-flop is used as a binary element for the divide-by-two function (CP₀ as the input and Q₀ as the output). The CP₁ input is used to obtain binary divide-by-five operation at the Q₃ output.

LS293

- A. 4-Bit Ripple Counter — The output Q₀ must be externally connected to input CP₁. The input count pulses are applied to input CP₀. Simultaneous division of 2, 4, 8, and 16 are performed at the Q₀, Q₁, Q₂, and Q₃ outputs as shown in the truth table.
- B. 3-Bit Ripple Counter — The input count pulses are applied to input CP₁. Simultaneous frequency divisions of 2, 4, and 8 are available at the Q₁, Q₂, and Q₃ outputs. Independent use of the first flip-flop is available if the reset function coincides with reset of the 3-bit ripple-through counter.

LS290 MODE SELECTION

RESET/SET INPUTS				OUTPUTS			
MR ₁	MR ₂	MS ₁	MS ₂	Q ₀	Q ₁	Q ₂	Q ₃
H	H	L	X	L	L	L	L
