PRODUCT DESCRIPTION

The ACA1206 is a surface mount monolithic GaAs RF Linear Amplifier that has been developed to replace, in new designs, the standard CATV Hybrid amplifiers currently in use. The MMIC consist of two parallel amplifiers, each with 15 dB gain. The amplifier is optimized for exceptionally low distortion and noise figure while providing flat gain and excellent input and output return loss for applications up to 1 GHz. The device requires single +12 V supply, and is offered in a RoHS-compliant package.

ELECTRICAL CHARACTERISTICS

Table 2: Absolute Minimum and Maximum Ratings

PARAMETER	MIN	MAX	UNIT
Amplifier Supplies (pins 10, 11, 14, 15)	0	+15	VDC
RF Input Power (pins 3, 6)	-	+70	dBmV
Storage Temperature	-65	+150	°C
Soldering Temperature	-	+260	°C
Soldering Time	-	5.0	sec

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Notes:
1. Pins 3 and 6 should be AC-coupled. No external DC bias should be applied.
2. Pin 7 should be pulled to ground through resistor R1, as shown in Figure 3. No external DC bias should be applied.

Table 3: Operating Ranges

Supply: V_{DD} (pins 10, 11, 14, 15)	-	+12	-	VDC
Operating Temperature	-40	-	+110	^{O}C

The device may be operated safely over these conditions; however, parametric performance is guaranteed only over the conditions defined in the electrical specifications.

APPLICATION INFORMATION

The ACA1206 is designed as an input stage. This part can be used alone for low gain, low output level applications or can be cascaded with one of the ACA0862 output stages for higher gain and output signal drive level. The ACA1206 is a low power dissipation part designed as a driver for the ACA0862B output stage.
