AIC2511

## 3A STEP-DOWN PWM CONVERTER

## FEATURES

- Operating Input Voltage From 4.5 V to 24 V
- $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$ and Adjustable Output Version
- Adjustable Version Output Voltage Range, 1.25 V to $24 \mathrm{~V} \pm 4 \%$ max Over Line and Load Regulation
- Available in TO-263-5, TO-220-5, TO-220B and TO-252-5 Package
- Requires Only 4 External Components.
- 150 KHz Fixed Constant Frequency
- Low Power Standby Mode, $\mathrm{I}_{\mathrm{Q}}$ Typically $80 \mu \mathrm{~A}$
- TTL Shutdown Capability.
- Current Limit and Thermal Shutdown Protection.
- 3A Guaranteed Output Load Current

## GENERAL DESCRIPTION

The AIC2511 series are step-down monolithic PWM converters for delivering 3 A at fixed voltages of $3.3 \mathrm{~V}, 5.0 \mathrm{~V}, 12 \mathrm{~V}$ and using an external divider to adjust output voltage from 1.25 V to 24 V with excellent line and load regulation.

Switching frequency up to 150 KHz is achievable thus allowing smaller-sized filter components. Internal current limit and thermal shutdown circuits provide protection from overloads. The internal precise reference combined with voltage feedback loop provides optimum output voltage accuracy and fast load transient response.

## APPLICATIONS

- Fixed Voltage power supply for LCD Monitor and LCD TV
- On-Card Switching regulators
- Simple High Efficiency Step-down regulator

## TYPICAL APPLICATION CIRCUIT

Example: AIC2511-50PM5TR
$\rightarrow$ 5.0V Output Version, in Lead Free TO-263-5 Package \& Taping \& Reel Packing Type
AIC2511-33PB5TR
$\rightarrow$ 3.3V Output Version, in Lead Free TO-220B Package
\& Taping \& Reel Packing Type

## ABSOLUTE MAXIMUM RATINGS

Supply Voltage ..... 24 V
FB, ON/OFF Pin Input Voltage ..... -0.3 V to 24 V
Operating Temperature Range ..... $-40^{\circ} \mathrm{C} \sim 85^{\circ} \mathrm{C}$
Storage Temperature Range ..... $-65^{\circ} \mathrm{C} \sim 150^{\circ} \mathrm{C}$
Junction Temperature ..... $125^{\circ} \mathrm{C}$
Lead Temperature (Soldering 10sec.) ..... $260^{\circ} \mathrm{C}$
Thermal Resistance Junction to Case TO-263-5, TO-220-5, TO-220B ..... $3^{\circ} \mathrm{C} / \mathrm{W}$
TO-252-5 ..... $12.5^{\circ} \mathrm{C} / \mathrm{W}$
Thermal Resistance Junction to Ambient TO-263-5 ..... $60^{\circ} \mathrm{C} / \mathrm{W}$
(Assume no ambient airflow, no heatsink) TO-220-5, TO-220B ..... $50^{\circ} \mathrm{C} / \mathrm{W}$
TO-252-5 ..... $100^{\circ} \mathrm{C} / \mathrm{W}$
Absolute Maximum Ratings are those values beyond which the life of a device may be impaired

AIC2511

ELECTRICAL CHARACTERISTICS $\left(T_{A}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{IN}}=12 \mathrm{~V}\right.$ for the $3.3 \mathrm{~V}, 5 \mathrm{~V}$ and Adjustable version and $\mathrm{V}_{\mathrm{IN}}=24 \mathrm{~V}$ for the 12 V version.) (Note1)

| PARAMETER | TEST CONDITIONS | MIN. | TYP. | MAX. | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |

## BLOCK DIAGRAM

## PIN DESCRIPTIONS

PIN 4: FB Feedback input for fixed-output or adjustable-output version. Connect directly to output for fixed operation version or to a resistor divider for adjustable operation versions.
PIN 5: $\overline{\mathrm{ON}} / \mathrm{OFF}$ Allows the switching regulator circuit to be shutdown using logic level signals thus dropping the total input supply current to approximately $80 \mu \mathrm{~A}$. Drive it high to disable the reference, control circuitry and internal switches. Drive low or connect to GND for normal operation.

## APPLICATION INFORMATION

## Thermal considerations

The AIC2511 is available with TO-220-5, TO220B, TO-263-5 and TO-252-5 packages. The TO-220-5 and TO-220B packages need a heat sink in most conditions. The TO-263-5 and TO-252-5 packages are designed to be soldered to the copper on a printed circuit board. The printed circuit board is the heat sink for TO-263-5 and TO-252-5 packages and other heat components, such as inductors and diodes. The size of the heat sink depends on the power loss of AIC2511 and the ambient temperature. The power loss of AIC2511 is determined by input voltage, output voltage and load current. The Fig. 4 represents the curve of the AIC2511 case temperature in different conditions.

The curve shows the AIC2511 temperature rises above ambient temperature for a 3A load with different input and output voltage. The values of
the temperature rise, which are affected by factors such as sink size, heat produced from heat components, and etc., may be different from those in Fig. 8 depending on the conditions of the application. According to the equation 1, as the power loss or ambient temperature is rising the heat sink size must be increased to decrease the thermal resistance $\left(R \theta_{j A}\right)$ so that the junction temperature does not over $125^{\circ} \mathrm{C}$. An appropriate increase of heat sink size may result in a normalranged junction temperature.

$$
P_{D}=\frac{T_{j}-T_{A}}{R \theta_{j A}}
$$

As junction temperature rises to its temperature protect point, the AIC2511 will stop working. Output voltage drops to zero until the junction temperature decreases to a normal range.

## APPLICATION INFORMATION (Continued)

## Components Selection

## Inductor

The inductor selection depends on the operating frequency of the AIC2511. The ripple current $\Delta L_{L}$ interrelates with inductor value. A lower inductor value gets a higher ripple current. Besides, a higher $\mathrm{V}_{\mathrm{IN}}$ or $\mathrm{V}_{\text {OUT }}$ can also get the same result. The inductor value can be calculated as the following formula.

$$
\mathrm{L}=\frac{1}{(\mathrm{f})\left(\Delta \mathrm{I}_{\mathrm{L}}\right)} \mathrm{V}_{\mathrm{OUT}}\left(1-\frac{\mathrm{V}_{\mathrm{OUT}}}{\mathrm{~V}_{\mathrm{IN}}}\right)
$$

Users can define the acceptable $\Delta I_{L}$ to gain a suitable inductor value.

## Diode

The diode current rating must be higher than 1.3 times maximum load current. Also, if the power supply needs to resist a continuous output short, the diode should have a current ration equal to the maximum current limit of the AIC2511. The reverse voltage rating of the diode should be higher than 1.25 times input voltage and the diode must be fast. The reverse recovery time of the diode is short.

## Capacitor

The selection of output capacitor depends on the suitable ripple voltage. Lower ripple voltage corresponds to lower ESR (Equivalent Series Resistor) of output capacitor. Typically, once the ESR is satisfied with the ripple voltage, the value of capacitor is adequate for filtering. The formula of ripple voltage is as below:

$$
\Delta \mathrm{V}_{\mathrm{OUT}}=\Delta \mathrm{I}_{\mathrm{L}}\left(\mathrm{ESR}+\frac{1}{8 \mathrm{fC}} \mathrm{C}_{\mathrm{OUT}}\right)
$$

The typical input capacitor is 470 uF . But as the temperature decreases, the input capacitor needs to increase to stabilize the circuit.

Assume the input voltage is 12 V , output voltage is 5 V and maximum load current is 3 A . The output ripple must be smaller than $2 \%$ of output voltage

Inductor selection

$$
\begin{aligned}
& L=\frac{1}{(f)\left(\Delta I_{L}\right)} V_{\text {OUT }}\left(1-\frac{V_{\text {OUT }}}{V_{\text {IN }}}\right) \\
& =\frac{1}{150 k \times 0.6} \times 5 \times\left(1-\frac{5}{12}\right)=32.4 u \mathrm{H}
\end{aligned}
$$

Here, the delta $I_{L}$ is 0.6 A . So we choose 33 uH inductor.

Output capacitor selection

$$
\Delta V_{\text {OUT }}=\Delta I_{L}\left(E S R+\frac{1}{8 f C_{\text {OUT }}}\right)<100 \mathrm{mV}
$$

We choice the capacitor value: $\mathrm{ESR}=0.12$, capacitance $=220 \mathrm{uF}$

$$
\Rightarrow \Delta V_{\text {OUT }}=\Delta I_{L}\left(E S R+\frac{1}{8 f C_{\text {OUT }}}\right)=74 \mathrm{mV}<100 \mathrm{mV}
$$

The full load is 3 A and delta $I_{L}$ is 0.6 A , so the diode current rating must be higher than 3.6A.

## CF Capacitor for adj version

As using the AIC2511 adj version, the CF capacitor is required to provide additional stability. In different condition, the CF capacitor must be changed to make the circuit stable.

| Output <br> Voltage (V) | Input <br> Voltage $(\mathrm{V})$ | R 1 <br> $(\Omega)$ | R 2 <br> $(\Omega)$ | CF <br> $(\mathrm{pF})$ |
| :---: | :---: | :---: | :---: | :---: |
