

# AK9813A

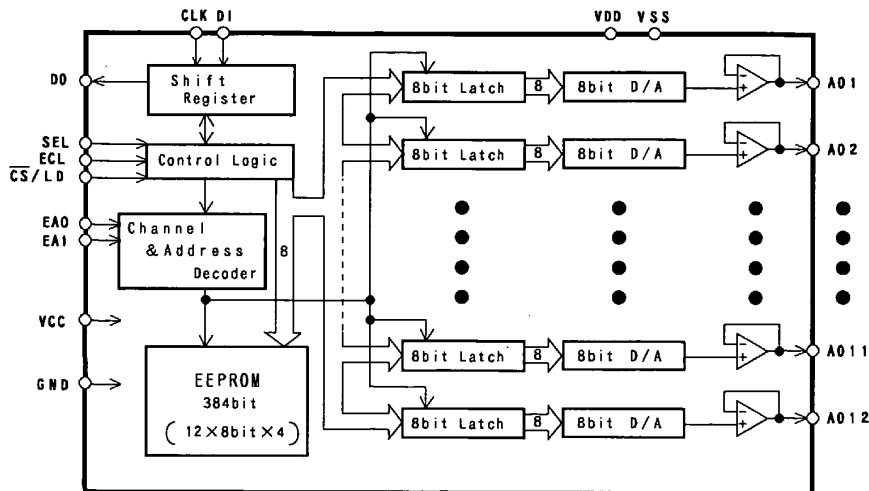

## 12ch 8bit D/A Converter with EEPROM

### General Description

The AK9813A includes 12 channel, 8bit D/A converters with on-chip output buffer amps and it is capable to store the input digital data of each DAC by on-chip non-volatile CMOS EEPROM. The AK9813A is optimally designed for various circuit adjustments for consumer and industrial equipments and it is ideally suited for replacing mechanical trimmers.

### Features

- EEPROM SECTION
  - 12 words × 8bit × 4 organization for DAC
  
- D/A converter section
  - 12 channels
  - Resolution : 8bit
  - DNL : -1~+2 LSB
  - INL : ±1.5 LSB
  - Analog Output Voltage Range : GND ~ VCC
  
- Operating Voltage Range
  - Digital section : 2.7V~5.5V
  - Analog section : 5.0V±0.5V, 3.3V±0.3V
  
- 24pin VSOP

■ Ordering Guide

AK9813AF

-10 to +85°C

24-pinVSOP

■ Pin Layout

■ Pin Description(1)

No.	Pin Name	I/O	Function
20	DI	I	Serial Data Input Pin SEL=High : 16bit data input format SEL=Low : 14bit data input format
17	DO	O	(SEL=High:CS I/F) AK9813A reads out the data with LSB first in the 16bit shift register to DO pin synchronously with falling edge of CLK. When the $\overline{CS}$ pin is high level, the DO pin becomes high impedance. In STATUS mode, the DO pin outputs Ready/Busy status. ----- (SEL=Low:LD I/F) AK9813A reads out the data with MSB first in the 14bit shift register to DO pin synchronously with falling edge of CLK. In WRITE mode, the DO pin outputs Ready/Busy status.
19	CLK	I	Shift Clock Input Pin(Schmitt-trigger input) AK9813A takes in the data from DI pin synchronously with rising edge of the CLK pin. The data are transferred to the internal shift register.
18	$\overline{CS}/LD$	I	Chip Select Input Pin(Schmitt-trigger input) The $\overline{CS}/LD$ is internally pulled up to VCC. ----- (SEL=High:CS I/F) After the $\overline{CS}$ pin changes from high level to low level while the CLK pin is high level, the AK9813A can input the data to the internal shift register and takes in the data from the DI pin synchronously with the rising edge of the CLK pin. After the $\overline{CS}$ pin changes from high level to low level while the CLK pin is low level, the AK9813A becomes the status mode and reads out the Ready/Busy status to the DO pin. When the $\overline{CS}$ pin changes from low level to high level regardless of Low/High level of the CLK pin, the AK9813A removes from the status mode to the normal mode. The $\overline{CS}$ pin usually should be kept at high level. ----- (SEL=Low:LD I/F) When the LD pin receives high pulse, the data of the internal shift register is transferred to the internal decoder or the register for D/A. The LD pin usually should be kept at low level.

■ Pin Description(2)

No.	Pin Name	I/O	Function
1   12	AO1   AO12	O	8bit D/A outputs with OP-AMP
14	Vcc	-	Digital section Power Supply Pin
23	GND	-	Digital section Ground Pin
13	Vdd	-	OP-AMP and D/A section Power Supply
24	Vss	-	OP-AMP and D/A section Ground
21 22	EA0 EA1	I	(SEL=High:CS I/F) In AUTO READ operation and ECL operation, the address of EEPROM is selected by the EA0 and the EA1 pins. ----- (SEL=Low:LD I/F) The address of EEPROM is selected by the EA0 and the EA1 pins.
16	ECL	I	When the ECL pin receives high pulse, the data in EEPROM is automatically loaded to each corresponding D/A, starting from AO1 to AO12 in order. Then each D/A output is settled to pre-determined value.
15	SEL	I	Input Data Format Select Pin SEL=High : CS I/F SEL=Low : LD I/F After power-up, this pin should be kept either at "high" or "Low."

**Data Configuration**

AK9813A have a shift register in order to control the chip.

When the SEL pin is "H"(CS I/F), the shift register becomes 16bit configuration and the data on the DI pin should be loaded with LSB first. When the SEL pin is "L"(LD I/F), the shift register becomes 14bit configuration and the data on the DI pin is loaded with MSB first.

The following description shows the configuration of the shift register.

The data set consist of 2-bits for the control of the internal EEPROM, 2-bits for the address of the EEPROM (CS I/F only), 4-bits for select of D/A converter and 8-bits for the digital input data of the 8bit D/A converter and total data set is 16bits or 14bits.

① Shift register configuration : SEL=High(CS I/F)

OUTPUT VOLTAGE FOR D/A CONVERTER

1	1	1	0	CAN'T USE
1	1	1	1	Don't Care

(NOTE) Above "Don't care" state is valid only when AK9813A is in DAC mode or WRITE mode.  
Refer to the following section "Instruction Set" about mode.

<b>Instruction Set</b>
------------------------

The AK9813A can be controlled for the following mode. The following mode is common to the LD I/F and the CS IF. When LD I/F is selected, "A1" and "A0" are set by the external pins (EA0 pin and EA1 pin).

- ① DAC mode(External DI pin -> D/A converter) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function
×	×	0	0	D/A Channel				Digital data for D/A							D/A output	

- ② CALL mode(Internal EEPROM -> D/A converter) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function	
ADDRESS	1	0	0	D/A Channel				×	×	×	×	×	×	×	×	×	READ

- The output of D/A converter is set by the data in the internal EEPROM.

- ③ ALL CALL mode(Internal EEPROM -> D/A converter) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function
ADDRESS	1	0	0	0	0	0	0	×	×	×	×	×	×	×	×	ALL CHANNEL READ

- The outputs of all D/A converters are set by the data in the internal EEPROM.
- • • Internal ECL function

- ④ WRITE ENABLE mode(Internal EEPROM WRITE ENABLE) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function
×	×	1	1	0	0	0	0	×	×	×	×	×	×	×	×	WRITE ENABLE

- After WRITE ENABLE mode is executed, the programming to the internal EEPROM is enabled. Upon power-up and after the execution of the ECL function, the AK9813A is in the programming disable state.

- ⑤ WRITE DISABLE mode(Internal EEPROM WRITE DISABLE) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function
×	×	1	1	1	1	1	1	×	×	×	×	×	×	×	×	WRITE DISABLE

- After WRITE DISABLE mode is executed, the programming to the internal EEPROM is disabled.

- ⑥ WRITE mode(External DI pin -> Internal EEPROM) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function
ADDRESS	0	1	0	D/A Channel				Digital data for D/A							WRITE	

- The digital data for D/A (D0~D7) is written into the specified address in the internal EEPROM. The state of the internal EEPROM must be the programming enable state.

- ⑦ READ mode(Internal EEPROM -> External DO pin) [×:Don't Care]

A1	A0	CL	WR	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0	Function	
ADDRESS	1	1	0	D/A Channel				×	×	×	×	×	×	×	×	×	EEPROM DATA output

- The DO pin outputs the data in the internal EEPROM synchronously with the falling edge of of the input pulse of the CLK pin.

Functional Description

① Timing Diagram for CS I/F (SEL="H")

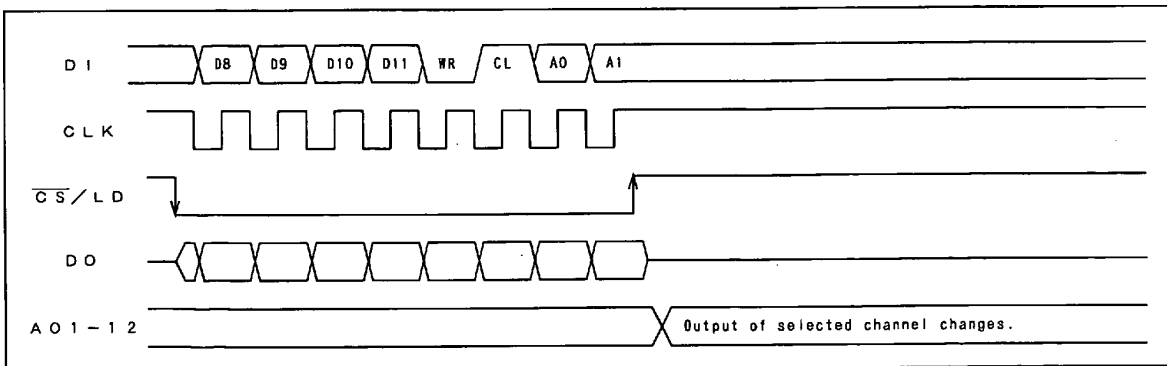

1.DAC mode:The internal EEPROM is not used.

2.WRITE ENABLE/DISABLE mode:The programming state of the internal EEPROM is set.

3.CALL mode: The output of the D/A is set by the data in the internal EEPROM.

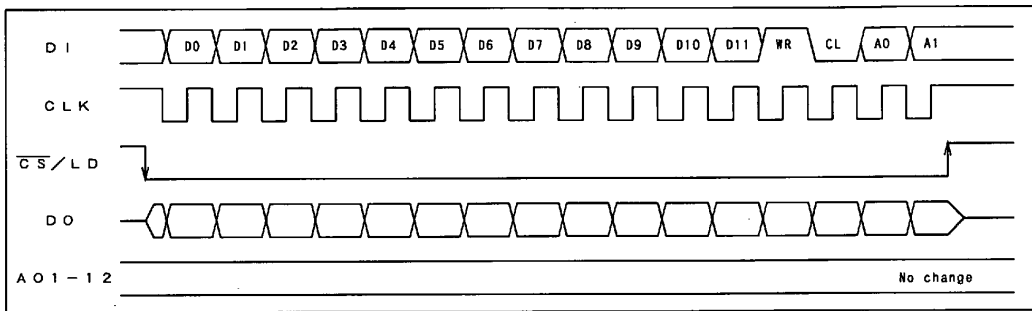

4.ALL CALL mode : The outputs of the all D/As are set by the data in the internal EEPROM.

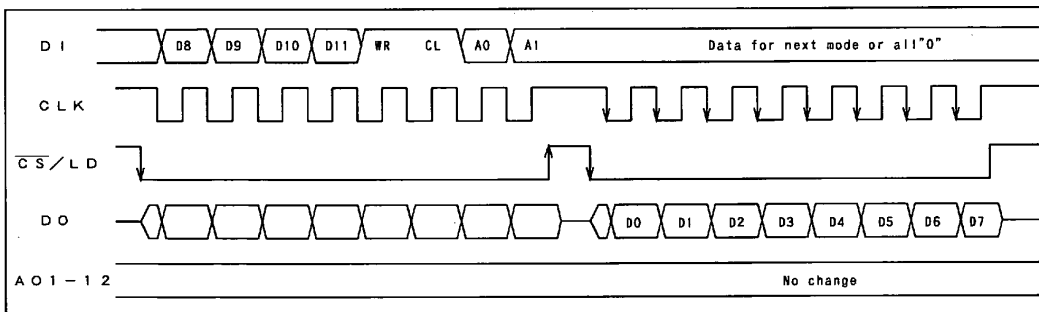

•The D/A outputs are set from AO1 to AO12 in order.

5.WRITE mode: The digital input data for D/A converter is written into the internal EEPROM.

6.READ mode: The data in the internal EEPROM is read from the DO pin.

7.STATUS mode: The DO pin outputs the Ready/Busy status from the DO pin.

8.ECL function : For "H" pulse to the ECL pin, the data in the selected address in the internal EEPROM is automatically loaded. Then each D/A converter output is settled to pre-determined value.

9. Transfer mode for the cascade connection

In case that AK9813A devices are connected in cascade, the AK9813A under programming cycle can transfer the data to the other AK9813A. The some AK9813A devices can be operated by the common CS signal at the same time.

Please note that the input data into to the AK9813A under programming cycle should be all"0" when the CS pin is changed from "L" to "H". If data except all"0" is input into the AK9813A under programming cycle, accidental data disturbance may occur.

② Timing Diagram for LD I/F (SEL ="L")

1.DAC mode:The internal EEPROM is not used.

2.WRITE ENABLE/DISABLE mode:The programming state of internal EEPROM is set.

3.CALL mode: The output of the D/A is set by the data in the internal EEPROM.

4.ALL CALL mode : The outputs of the all D/As are set by the data in the internal EEPROM.

- The D/A outputs are set from AO1 to AO12 in order.

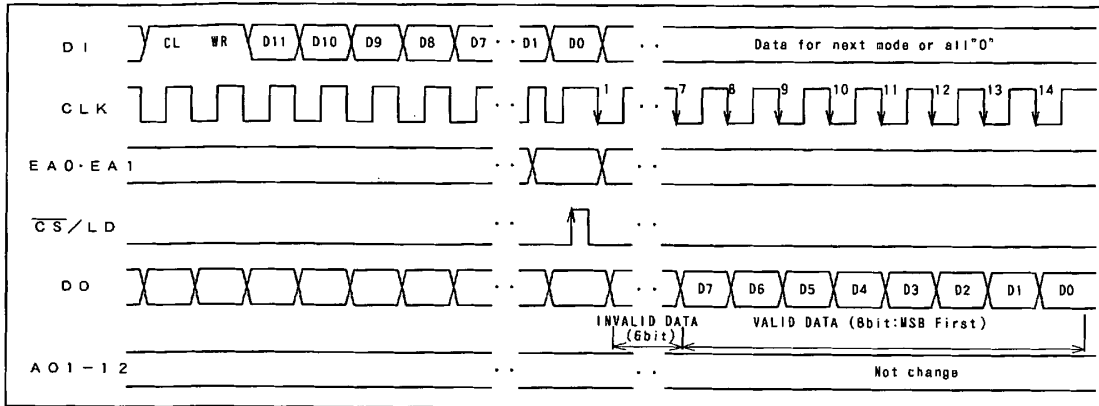

5.WRITE mode: The digital input data for D/A converter is written into the internal EEPROM.

(NOTE)

- \* In case that AK9813A devices are connected in cascade, when a AK9813A device is under programming cycle, the AK9813A device under programming cycle can not transfer the data to the other AK9813A device and some AK9813A devices can not be operated by the common  $\overline{CS}$  signal at the same time.
- \* While programming cycle, the  $\overline{CS}/LD$  pin should be "L".
- \* When the Ready/Busy signal from the DO pin is verified, the  $\overline{CS}$  pin should be changed from "H" to "L" and kept at "L". If the  $\overline{CS}$  pin is kept at "H", the Ready/Busy signal does not output correctly.

6. READ mode: The data in the internal EEPROM is read from the DO pin.

7. ECL function:

When the ECL pin received high pulse, the data in EEPROM is automatically loaded to each corresponding D/A, and starting from AO1 to AO12 in order. Then each D/A output is settled to pre-determined value.

- <All Call mode>
- <Read mode>

\* Please refer to the data timing regarding the input timing for the DI pin

◇ AC measurement circuit

- Test Load1

- Test Load2

- AC test point

Digital Input/Output Level : 50% • 20% of Vcc  
 Analog Output Level : 90% • 10% of Vcc

## IMPORTANT NOTICE

- These products and their specifications are subject to change without notice. Before considering any use or application, consult the Asahi Kasei Microsystems Co., Ltd. (AKM) sales office or authorized distributor concerning their current status.
- AKM assumes no liability for infringement of any patent, intellectual property, or other right in the application or use of any information contained herein.
- Any export of these products, or devices or systems containing them, may require an export license or other official approval under the law and regulations of the country of export pertaining to customs and tariffs, currency exchange, or strategic materials.
- AKM products are neither intended nor authorized for use as critical components in any safety, life support, or other hazard related device or system, and AKM assumes no responsibility relating to any such use, except with the express written consent of the Representative Director of AKM. As used here:
  - (a) A hazard related device or system is one designed or intended for life support or maintenance of safety or for applications in medicine, aerospace, nuclear energy, or other fields, in which its failure to function or perform may reasonably be expected to result in loss of life or in significant injury or damage to person or property.
  - (b) A critical component is one whose failure to function or perform may reasonably be expected to result, whether directly or indirectly, in the loss of the safety or effectiveness of the device or system containing it, and which must therefore meet very high standards of performance and reliability.
- It is the responsibility of the buyer or distributor of an AKM product who distributes, disposes of, or otherwise places the product with a third party to notify that party in advance of the above content and conditions, and the buyer or distributor agrees to assume any and all responsibility and liability for and hold AKM harmless from any and all claims arising from the use of said product in the absence of such notification.
