

CLEARLOGIC

# CL8452A

Laser-Configured ASIC Family

## Key Features

- ◆ Laser-Configured ASIC (LASIC<sup>®</sup>) technology offers the ultimate combination of performance, flexibility, and low cost
- ◆ Functionally, architecturally, and electrically compatible with industry-standard FLEX<sup>®</sup> 8000 series FPGAs
- ◆ High Density
  - 4,000 Usable gates
  - 452 Flip-flops
  - 120 Maximum user I/O pins
- ◆ Laser fuse technology provides very fast, dense interconnect routing
- ◆ Optional Instant-On configuration eliminates the need for an external configuration EPROM
- ◆ Fabricated using 0.5 micron CMOS process
- ◆ Very low current consumption (active and standby)
- ◆ Alpha particle immune

## CL8000 Product Family Overview

Parameter	CL8282A	CL8452A	CL8636A	CL8820A	CL81188A
Available Gates	5,000	8,000	12,000	16,000	24,000
Useable Gates	2,500	4,000	6,000	8,000	12,000
Flip-flops	282	452	636	820	1,188
Logic Elements	208	336	504	672	1,008
Max user I/O pins	78	120	136	152	184
Packages	84 pin PLCC 100 pin TQFP	84 pin PLCC 100 pin TQFP 160 pin PQFP	84 pin PLCC 160 pin PQFP 208 pin PQFP	144 pin TQFP 160 pin PQFP 208 pin PQFP	208 pin PQFP 240 pin PQFP

**Description**

The Clear Logic CL8000 Laser-Configured ASIC (LASIC<sup>®</sup>) family offers the ultimate combination of performance, flexibility, and cost. This family is a system level second source to Altera FLEX<sup>®</sup> 8000 products. For designs not requiring in-system reprogrammability, design verification can be performed using the programmable Altera devices, and Clear Logic LASICs can be used for low cost, high volume production.

Clear Logic's innovative laser ASIC technology eliminates NRE costs, test vector development, ordering minimums and long lead times. No re-simulation or re-layout is required, as the device is engineered using a cell-based, PLD-like architecture. Clear Logic's TestCell technology ensures complete test coverage through the use of specialized testing modes which are transparent to the user.

The Clear Logic CL8000 Laser-Configured ASIC family is based upon a large array of logic elements. Each logic element contains a configurable look up table for combinatorial functions and a register for sequential operations. A group of eight logic elements forms a block. Laser-configured metal fuses implement logical functions and control signal routing

Laser configuration provides reduced cost and enhanced performance. These inherent performance benefits include extremely consistent propagation delays, reduced power consumption, and improved immunity to noise and upset events.

**Configuration**

Clear Logic's CL8000 LASIC<sup>®</sup> family is compatible with all six configuration modes defined for the FLEX<sup>®</sup> 8000 product family. These configuration modes include the following:

- ◆ Active Serial
- ◆ Active Parallel Up
- ◆ Active Parallel Down
- ◆ Passive Parallel Synchronous
- ◆ Passive Parallel Asynchronous
- ◆ Passive Serial

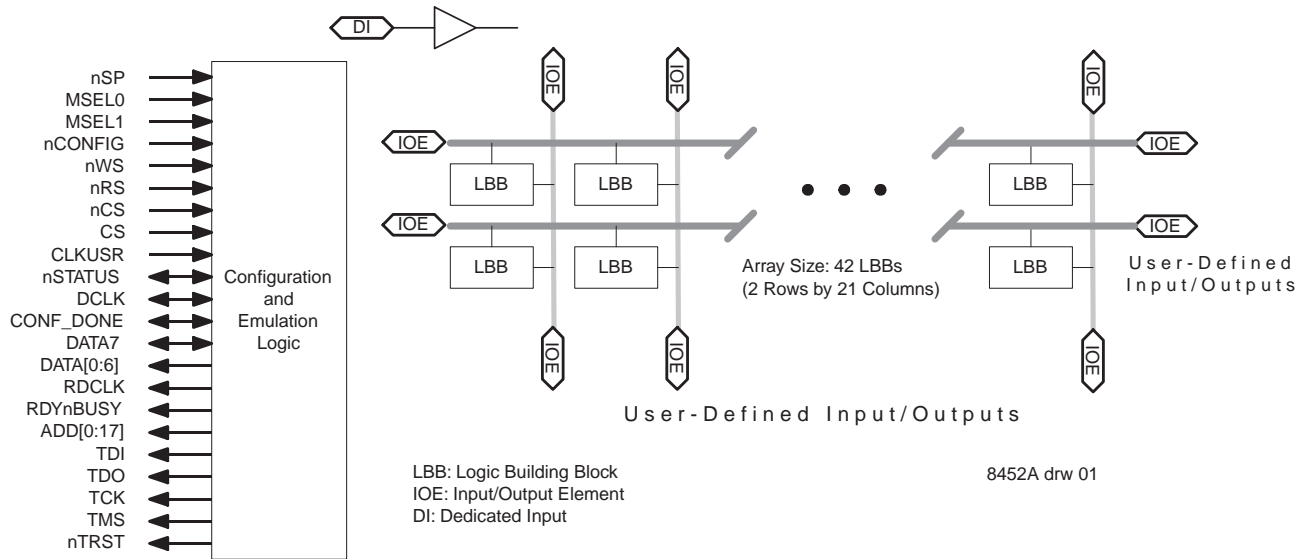

The CL8000 is already configured when it is shipped, and can be configured to bypass the FLEX<sup>®</sup> 8000 configuration modes. This “Instant-On” configuration mode eliminates the need for external EPROMs or microcode. In the Instant-On mode, the CL8000 device begins Initialization immediately upon a low-to-high transition on the nCONFIG pin.

## Additional Information

For further information on designing with the CL8000 LASIC family, please refer to the following documents:

- ◆ AN-01: Requesting a First Article. This document provides instructions on how to submit a bitstream file for generation of first articles.
- ◆ AN-02: Clear Logic Packaging Guide. This document provides specifications and drawings for packages used by the CL10K family and other Clear Logic devices.
- ◆ AN-03: CL8000 and System Configuration. This document contains a detailed discussion of all aspects of configuring CL8000-based systems.
- ◆ AN-04: CL8000 Technology White Paper. This document outlines the technologies employed by the CL8000 LASIC family.
- ◆ AN-05: Calculating CL8000 Power Consumption. This document provides guidelines for calculating power consumption based on CL8000 design characteristics.
- ◆ AN-06: Eliminating the Serial EPROM from FLEX 8000 Designs. This document outlines how additional savings can be achieved by removing the EPROM from the CL8000 LASIC family.
- ◆ AN-07: CL8000 Test Methodology. This document describes how Clear Logic provides 100% stuck-at fault coverage.
- ◆ AN-08: CL8000 LASIC Timing and Function Compatibility. This document shows how a seamless conversion from FPGA to ASIC can be achieved with no additional engineering can be achieved with Clear Logic.

8K tbl 09B

**AC Test Conditions**

A: Test fixture set-up A is for general testing.  
 B: Test fixture set-up B is for high Z testing ( $t_{ZX\#}$ ).

**Notes to Tables**

1. During transitions, inputs may undershoot to -2.0V for periods shorter than 20ns. Otherwise, minimum DC input voltage is -0.3V.
2. The following devices do not have  $V_{CCIO}$  pins: CL8282A, CL8452A. For these devices, all references to  $V_{CCIO}$  should be changed to  $V_{CCINT}$
3. Typical values are at  $V_{CC}$  of 5.0 volts and ambient temperature of 25 °C.
4. Guaranteed but not tested. Characterized initially, and after any design changes which may affect these parameters.
5. Internal timing delays are based on characterization, and cannot be explicitly tested. Internal timing parameters should be used for performance estimation only.
6. Use AC Test Conditions set-up B for these parameters.

**Revision History**

- 16 Jan. 1998: Created new document
- 31 Jul. 1999: Recompiled databook, 8820 package update.
- 29 Nov. 1999: Remove reference to the 8282AV device which is not supported.
- 01 Dec. 2000: Review and reprint.
