EZ55Z3L
0.25 Amp Positive Voltage Regulators

Description

The EZ55Z3L voltage regulators are monolithic integrated circuits designed for use in applications requiring a well regulated positive output voltage with low input-to-output differential voltage requirements.

Outstanding features include full power usage up to 250mA of load current, internal current limiting and thermal shutdown. Safe area protection on the die is also included, providing protection of the series pass transistor under most operating conditions. The SOT-223 package is available for cost effective applications.

Features

- External capacitor not required for stability
- Low dropout performance
- Fixed 3.3V or adjustable (down to 1.25V) options available
- Line regulation typically 0.015%
- Load regulation typically 0.1%
- SOT-223 package

Notes:

(1) Specifications are applicable for a power dissipation of 2.5W and are only achievable over a limited range of V_{IN} - V_{OUT}.

(2) Low duty cycle pulse testing with Kelvin connections required. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.

(3) 30ms pulse.

(4) Bandwidth of 10Hz to 10kHz

(5) 120Hz input ripple, 1 dB less for each volt increase above 3.3V Min.; C_{OUT} & C_{ADJ} (for ADJ) = 25µF.
