

# FAN7563/FAN7564

## Lithium-Ion Charger Controller

### Features

- Constant Voltage & Constant Current Control
- Wide Operating Range of 2.5V ~ 16V
- Low-Side Source Return Current Sensing
- Externally Adjustable Charging Current Control
- Charging Current Monitoring
- Precision LDO Regulator Drive Output (Adj)  
(Only FAN7564)
- Error signals of Output Dropout (LDO)  
(Only FAN7564)
- Current Limit (LDO)  
(FAN7564 Only)

### Description

The FAN7563/FAN7564 is designed for Lithium-ion battery charger. This controls charging current and voltage of Lithium - ion battery as constant current and constant voltage control IC and can be used for stand alone charger (FAN7563) and micom interface charger(FAN7564). In addition LDO regulator driving output which is integrated within FAN7564 enables to offer accurate reference voltage to power supply of micro controller, therefore, it features increasing stability and efficiency of charger set as well as minimizing external components of the set. Additionally, FAN7563/FAN7564 provide the protection functions like error flag, short circuit protection(LDO), and charging current control disable.

### Internal Block Diagram

## Pin Assignments

## Pin Definitions

Pin Number	Pin Name	Pin Function Description
1	OUTPUT	Output pin for charging control. An external photocoupler is driven from the output for constant voltage and constant current charging control.
2	ISEN	Reference input for current amplifier.
3	CS	Charging current sensing input . It is connected to a sense resistor (system ground)
4	GND	Ground
5	MONIT	Charging current monitoring output. This pin is connected to a micro controller and detects the amplified voltage derived from CS pin.
6	IREF	Reference current control input. The Amplifier reference current is controlled according to the resistor which is connected to the pin IREF.
7	VSEN	Voltage sensing input for constant battery voltage control. It is normally connected to the battery charger output through a resistor divider.
8	VCC	Power supply input. The typical operating voltage range is 2.5V to 16V.

## Pin Assignments (Continued)

## Pin Definitions (Continued)

Pin Number	Pin Name	Pin Function & Description
1	OUTPUT	Output pin for charging control. An external photocoupler is driven from the output for constant voltage and constant current charging control.
2	ISEN	Constant current loop reference Input.
3	CS	Charging current sensing input . It is connected to a sense resistor (system ground)
4	GND	Ground
6	CHA-	Charging current monitoring feedback input. monitoring output voltage can be changed by alternating the value of external resistor which is connected to the pin6, CHA-
7	FB	LDO output voltage sensing input. It is normally connected to the LDO output through a resistor divider.
8	LDODRV	LDO driving output. This is connected to the base of external TR (KSA539)
9	ERROR	LDO dropout error flag. This keeps the error signal off until the bias voltage for micro controller reaches the threshold voltage. Error signal becomes ON when the voltage reaches 4.8V. (With hysteresis 60mV)
11	MONIT	Charging current monitoring output. This pin is connected to a micro controller and detects the amplified voltage derived from CS pin.
12	IREF	Reference current control input. The Amplifier reference current is controlled according to the resistor which is connected to the pin IREF.
13	VSEN	Voltage sensing input for constant Battery voltage control. It is normally connected to the Battery charger output through a resistor divider.
14	VCC	Power supply input. The typical operating voltage range is 2.5V to 16V.

## Absolute Maximum Ratings (Ta = 25°C)

Parameter	Symbol	Value	Unit
Supply Voltage	V <sub>CC</sub>	2.5 ~ 16	V
Ldodrv Sink Current	I <sub>drv</sub>	2	mA
Output Sink Current	I <sub>O</sub>	20	mA
Power Dissipation	P <sub>d</sub>	0.75	W
Operating Temperature Range	Topr	-25 ~ 85	°C
Storage Temperature Range	Tstg	-65 ~ 150	°C

## Electrical Characteristic (FAN7563)

( V<sub>CC</sub> = 6V, Ta= 25°C, for min/max values Ta is the operating junction temperature range that applies(NOTE 1), unless otherwise noted.)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
<b>TOTAL DEVICE</b>						
Input Supply Current	I <sub>CC</sub>	V <sub>CC</sub> =6V, I <sub>load</sub> =1mA, I <sub>O</sub> =0A	-	-	3	mA
<b>REFERENCE SECTION</b>						
Reference voltage	V <sub>ref</sub>	V <sub>CC</sub> =6V, I <sub>load</sub> =50mA, Ta=25°C	1.23	1.245	1.26	V
		Full Temperature Range	1.22	1.245	1.27	
<b>CONTROL PART</b>						
<b>UVLO Section</b>						
High Threshold Voltage	V <sub>th(H)</sub>	-	-	2.5	2.6	V
Low Threshold Voltage	V <sub>th(L)</sub>	-	2.3	2.4	-	
Hysteresis 2	V <sub>hys2</sub>	-	-	0.1	-	
<b>VOLTAGE SENSE SECTION</b>						
Voltage Sense Threshold Voltage	V <sub>vsen</sub>	V <sub>CC</sub> = 6V, Ta = 25°C	1.23	1.245	1.26	V
		Full Temperature Range	1.22	1.245	1.27	
Threshold Voltage Temperature Coefficient	$\Delta V_{vsen} / \Delta T$	-	-	±0.01	-	%/°C
Input Bias Current	I <sub>i</sub>	-	-	40	-	nA
Transconductance	g <sub>m</sub> (V)	-	-	1	-	S
<b>CURRENT SENSE SECTION</b>						
Current Sense Threshold voltage	V <sub>isen</sub>	V <sub>CC</sub> = 6V, Ta=25°C	-190	-200	-210	mV
		Full Temperature Range	-	0	-	mV/°C
Transconductance	g <sub>m</sub>	-	-	1	-	S
Current Reference Voltage	V <sub>iref</sub>	R <sub>pin12</sub> =25KΩ, Ta=25°C	1.23	1.245	1.26	V
		Full Temperature Range	1.22	1.245	1.27	
<b>OUTPUT SECTION</b>						
Output Sink Current	I <sub>O</sub>	-	5	-	-	mA
Output Saturation Voltage	V <sub>sat</sub>	I <sub>O</sub> =5mA	-	200	400	mV

### NOTE:

1. Tested ambient temperature range for the FAN7563: T<sub>low</sub> = -25°C, T<sub>high</sub>=85°C
2.  $S = \frac{1}{R}$

## Electrical Characteristic (Continued) (FAN7564)

(VCC = 6V, Ta = 25°C, for min/max values Ta is the operating junction temperature range that applies (NOTE 1), unless otherwise noted.)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit

		Full Temperature Range	1.22	1.245	1.27	

## Electrical Characteristic (Continued) (FAN7564)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
<b>OUTPUT SECTION</b>						
Output Sink Current	$I_O$	-	5	-	-	mA
Output Saturation Voltage	$V_{sat}$	$I_O=5mA$	-	200	400	mV

**NOTE:**

1. Tested ambient temperature range for the FAN7564:  $T_{low} = -25^{\circ}C$ ,  $T_{high}=85^{\circ}C$
2. Tested with Circuit 1. Output capacitor,  $C_o$  is commonly used to provide improved output impedance and rejection of transients. The regulated output voltage is given by :  $V_o=V_{ref}*(1+R_a/R_b)$
3.  $S = \frac{1}{R}$
