

FQ2 Smart Camera

» Camera, Communications, Software Tools, and Much More

Introducing the Smart Heavyweight

New Models with Code Reading and OCR with Built-in Dictionary

Flexible inspection capabilities, multiple camera and communication options -this powerful vision sensor has it all. Omron's FQ2 Series provides all of the best-selling features found in high-end models without the need for a separate controller. This new Smart Camera was designed to solve your toughest inspection challenges.

360°

position

Ultra-

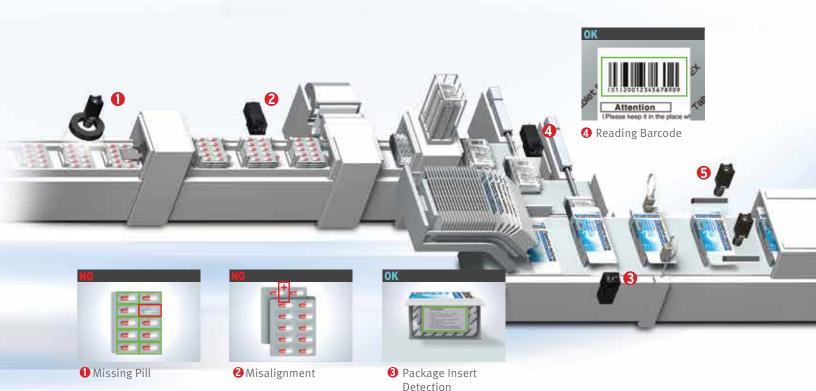

Image inversion

Three Advantages for Effective Machine Design

Compact Body

All in One Vision Sensor

All-in-one compact size that is perfect for use in tight spaces or as an aftermarket option. Compared to more-advanced Vision Sensors with multiple components, this Sensor boasts a much more efficient hardware design.

Extended Functions

Image Sensor, OCR, and Code Reader in One

The OCR function adds to the sensing solution and provides a powerful upgrade. It features a "built-in" dictionary ability to recognize 15 Code types.

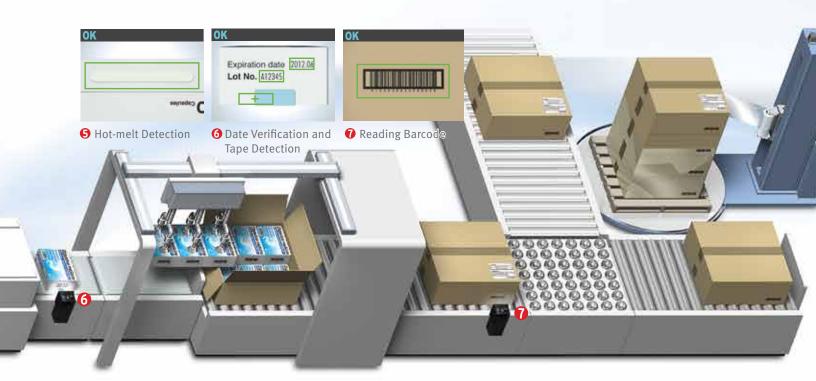

Diverse Lineup

A Lineup That Fits a Wide Range of Applications

Expanded inspection menu, camera variations, and communication interfaces. With a wide range of sensors, an option for every application now becomes a standard option.

All You Need is One

Combined Lighting, Controller and Communications

Image Processor

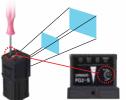

Although previous Vision Sensors placed the image processor in a separate Controller, now we have built the processor into the camera unit.

High-power Lighting

Built-in high-power lighting capable of evenly lighting across a wide field of view. Providing sufficient lighting even when the polarizing filter is used.

Adjustable Lens

The focus of the lens can be adjusted for the specific field of view and installation distance you need.

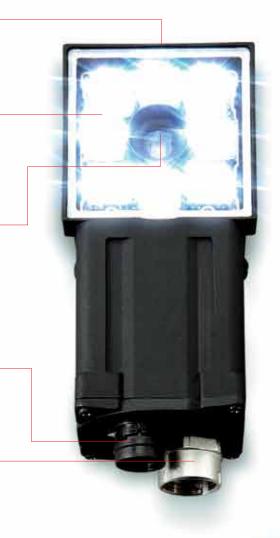

Focus adjustment screw

I/O Power Supply Connector

The external output line for inspection results, the input line for changing the setup, and the power supply line are all combined into one connector.

Ethernet Connector

Commands can be input from a PLC to control the FQ2, and inspection results and measurement results can be output from the FQ2 to a PLC. You can also transfer images to a computer.

IP67 Water Resistance

The sensor can be used in wet environments.

Flexible Cables

All cables from the camera are flexible. This allows the sensor to be used safely on moving parts.

Smart Click Connectors

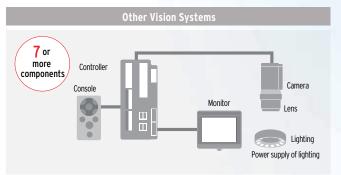

Connection is made quick and easy with a clear, definitive click-into-place mechanism.

Quick and Easy Design and Installation

Easy Product Selection

All you need to do is select the camera based on the field of view and installation distance that you require. There is no need to select and purchase additional lighting or lenses. Furthermore, the time required to wire everything has been drastically reduced due to the low number of components.

Easy Installation

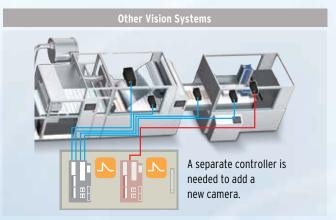

The camera and lighting have been integrated into a single unit, so only one camera mounting bracket is required. The sensor comes with a multi-directional mounting bracket that can be attached on any of the four sides of the camera. Axis alignment is not required because the lighting and the camera are integrated into a single unit.

Easy Expansion Up to 32 Cameras

Simply install the cameras where you need them, when you need them. No control panels are required to house the controllers. Triggers can be input for each camera, so new cameras can be added whenever required without having to worry about timing input design. Up to 32 cameras can be set up from a single Touch Finder without adding new monitors when you need more cameras.

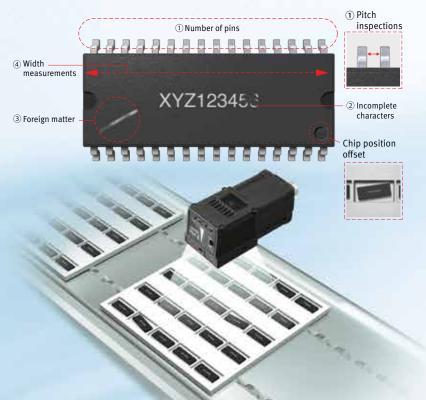

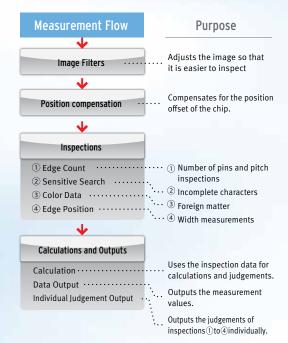

Easily Perform Both Inspection and Positioning

You can combine multiple inspection items to perform external inspections, positioning, and other tasks all from a single Sensor.

External Inspection

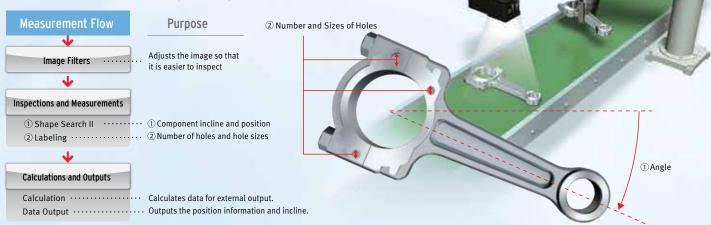

External inspection of ICs can be completed with a single Sensor. The position offset of the entire pallet before inspection can be adjusted on the image itself, which reduces the amount of work required to increase mechanical positioning accuracy.

Component Positioning

The Sensor can measure angles of rotation and other position information, so it can also be used for positioning. Inspections can also be performed for the number and size of holes along with the position information.

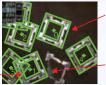

Incorporating the Best - Inspection Tools from the High-end Vision Systems

Search Tools

Shape Search II Ten Times Faster Than Previous Searching

General searches have a difficult time with overlap or 360° rotation, but this Sensor achieves high-speed, stable searching of any shapes that match the model.

Workpieces are detectable even if there ___ is overlapping.

Workpieces are detectable even if they are rotated up to 360°

Deformed, faulty products are judged as NG.

Multiple searches can be performed simultaneously, which enables the inspection of the number of items in a pallet or picking applications.

Workpieces are detectable even with different amounts of light.

Sensitive Search

Through automatic division and matching of the model image, tiny differences that cannot be detected with a normal search can be detected with large numerical differences.

^{ок} 011. 10/B9 6.

One character is missing.

NG 2011 0/89 6.

Search Tools

Search

This is a standard search inspection item. This type of search is used to detect items like labels, identify shapes, or positions.

Detection of Promotional Stickers

Edge Tools

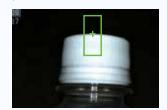

Edge Pitch

The number of edges in a region can be counted.

Edge Position

This inspection item detects edges and measures their positions.

Edge Width

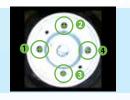

This inspection item measures the width between edges.

Area and Color Tools

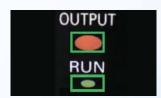

Labeling

This inspection item counts how many labels there are of the specified color and size and measures the area or center position of the specified label.

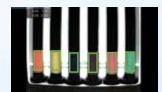

Area

This inspection item measures the area and center position of the specified color.

Color Data

Inspections can be performed that compare the difference in color between the workpiece and a registered image of a good product to detect objects and foreign matter.

You can also inspect for defects and foreign matter by looking at the color deviation. (Referenced from original sample.)

Utility Items

360° Rotational Position Compensation

Inspections for products with inconsistent position can easily be corrected. Compensation of the placement of inspection regions simplifies the manufacturing process with the ease of product tracking.

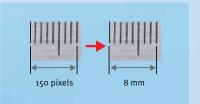

Image Filters

A total of 11 different image filters are provided, including background suppression to help eliminate patterns that can result in unstable measurements.

Calibration

Pixel unit measurement can be converted to user units for the dimensions of a workpiece, providing a user display that is easy to understand.

New OCR Method without Character Registration into a Dictionary

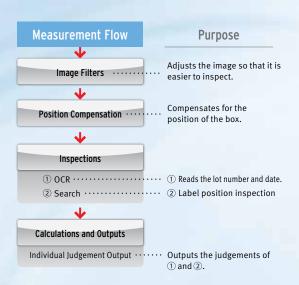

Date Verification

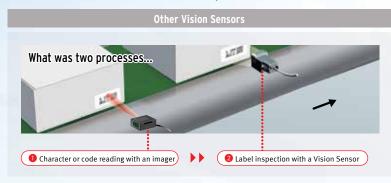

Character Verification and Label Position Inspection

Although previously performed as separate processes, character verification and inspections can now both be performed with one FQ2 Sensor. This helps you reduce costs and save space.

OCR with Built-in Dictionary

OCR

The built-in dictionary contains approximately 80 different fonts that are used on the factory floor. Variations for worn characters, blurred, distorted, different backgrounds, and size changes have been included to enable stable and highly accurate readings. It is not necessary to set parameters to compensate for character contrast or positional offsetting.

Conventional OCR

Time is required for character registration into the dictionary.

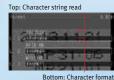

Built-in Dictionary

Up to four lines can be read. The following characters can be read.

- · Letters of the alphabet: A to Z (uppercase)
- · Numbers: o to 9 • Symbols: ' - . : /

2 Set the character formats.

The character format is displayed from the read results. Set the character format according the format of the characters to read.

• Letter: \$ • Number: # · Symbol: @ · Not read: *

• Number or letter: ?

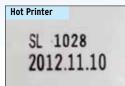

automatically adjusted according to the conditions of the printed characters.

Reading is started.

Different printers use different printing methods.

Characters from most printers can be read, including dot and impact printers. Handles Approx. 80 Fonts

Unique recognition technology enables stable readings of worn out or distorted characters.

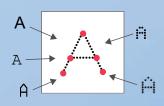

Small Characters

SL 1028 2012.11.10

New OCR Tool: Character Matching with Structural Models

In some applications it is required for image matching methods, but thanks to the structural model matching of specific characteristic points there is no need for character registration.

Structural models record the characteristics of each character in approximately 80 fonts.

The position and the structure of characteristic points are used to recognize characters.

Background Changes Size and Font Changes

Worn Characters Inclined Characters

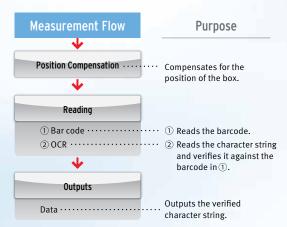

Capability to Read Any of 15 Code Types from Paper Labels to Direct Marking

Code and Character Verification

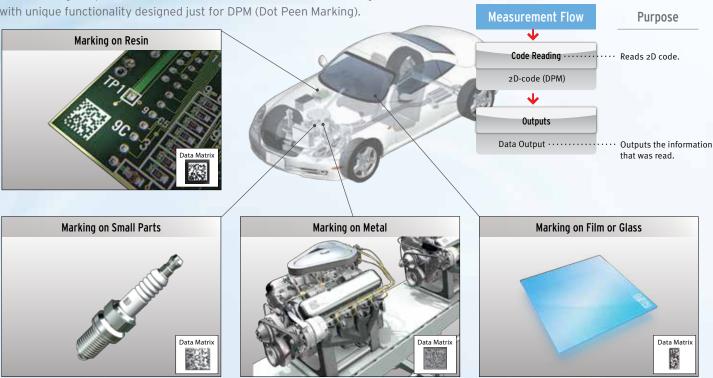

OCR and Code Reading inspection items can be combined to read codes and verify them against character strings all within the FQ2.

Reading Direct Marking Codes

It is common to manage information by using direct marking codes on products. However, differences in materials often causes instability when reading the printed characters. The FQ2 achieves stable reading with unique functionality designed just for DPM (Dot Peen Marking).

Barcodes

The FQ2 can read the main nine types of barcodes. Additionally, the FQ2 can be used in pharmaceutical applications, where verification of barcodes and characters is required.

JAN/EAN/UPC	Code39	Codabar (NW-7)
ITF (Interleaved 2 of 5)	Code93	Code128 / GS1-128
GS1-DataBar	GS1-128 Composite Code	Pharmacode

2D Codes

The FQ2 can read the main six types of 2D codes. You do not need to use more than one code reader even for processing that combines different types of codes.

Data Matrix	QR Code	Micro QR Code	
PDF417	Micro PDF417	GS1-DataMatrix	

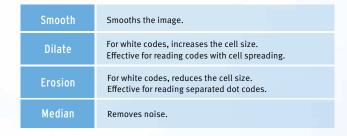

Direct Marking

2D DPM (Dot Peen Marking) Codes

When 2D codes are printed on metal, substrates, glass, or other materials, the printed 2D codes can be inconsistent. Even with these difficult-to-read codes, the FQ2 is equipped with filters and retry processing designed just for DPM to allow you to easily and stably read the codes.

Types of Filtering

In order to achieve stable readings you can remove printing irregularities and noise by applying up to three of the four unique filters developed by OMRON.

· Combining Filtering

Erosion and dilation can be combined to connect dots without changing the dot thickness.

· Retry function

Code readers must overcome environmental and poor printing conditions that cause unstable readings. The FQ2 has a retry function that retries readings by changing the exposure time and other reading conditions.

Retrying the Specified Number of Times with the Same Conditions

Reading is performed for the specified number of times for the same scene.

N G N G O K

3 Retrying While Changing the Shutter Speed

Reading is performed for the same scene while changing the exposure time in stages.

N G N G N G O K 1ms 1.3ms 0.7ms 1.6ms

2 Retrying While External Trigger Is Input

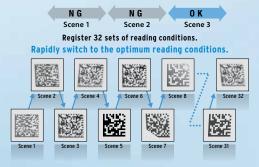

Reading is performed until successful, as long as an external level trigger is input.

During level trigger input

N G N G O K

4 Retrying While Changing the Reading Conditions

When reading DPM codes, inconsistencies in printing conditions can result in NGs if reading is performed with only one set of reading settings. The FQ2 allows you to register up to 32 sets of reading conditions as scenes and retry reading while changing the scenes in order. The system automatically determines the scenes with the highest usage rates and changes the order to start with them to flexibly handle changes in reading conditions. Of course you can specify a fixed order if required.

A Lineup That Fits a Wide Range of Equipment

Sensors

We offer a diverse lineup of Sensors so that you can choose the one with the perfect field of view and installation distance for your needs.

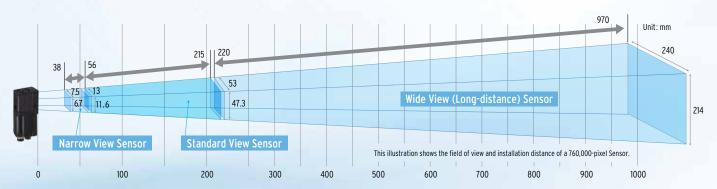

Integrated Sensor

Monochrome

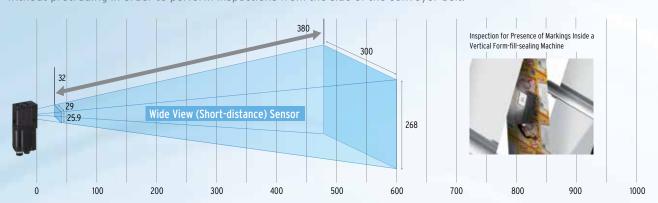

· Seamless Field of View Variations

All-in-one Sensors tend to be limited in field of view variations, but we offer a lineup ranging from 7.5 mm up to 240 mm to meet your needs.

· Wide View Sensors -- Perfect for Tight Spaces

A side-view wide-angle camera takes images and performs inspections across a wide area, even if the camera is close to the workpiece. Perfect for mounting the sensor in locations with limited space. This also enables the Sensor to be installed alongside an assembly line without protruding in order to perform inspections from the side of the conveyor belt.

Sensors with C-mount lens

The Sensors with C-mount lens enable freedom of lens selection for long distances over 1 m and narrow fields of view under 1 mm that are not covered by our integrated Sensors. This type of Sensor is also useful when you want to use external illumination.

 $Note: A \ commercially \ available \ telecentric \ lens \ is \ required \ for \ narrow \ field \ of \ view \ applications.$

65mm

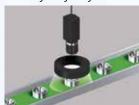

Lighting Examples

External Shape Inspections

Low-angle Lighting

Defect and Foreign Matter

Communication Interfaces

The Sensor includes communication interfaces to connect with a wide range of host devices. Saving setup time for communications between the sensor and the PLC.

PLC Link

PLC link greatly reduces the amount of time and work required to create ladder programs.

FINS

OMRON's exclusive FINS/TCP communications interface can be used to connect to low-cost OMRON PLCs. With this communications interface, no communications controls are required to process the sending and receiving of complex TCP packets. You get faster, simpler connections to OMRON PLCs.

EtherNet/IP

EtherNet/IP communications enable simple and easy connections to a wide range of EtherNet/IP devices, including OMRON PLCs.

I/O Expansion Units

Our expansion units enable expansion of up to three times the number of I/O points. This enables the output of individual judgement results for each inspection.

RS-232C Communications Unit

This Sensor Data Unit supports standard RS-232C communications.

Note: The type of communications interface depends on the model of the Sensor. Refer to page 22 for details.

Compatible Models

OMRON PLCs: CS, CJ1, CJ2, CP1 and NSJ Series Mitsubishi Electric: Q Series

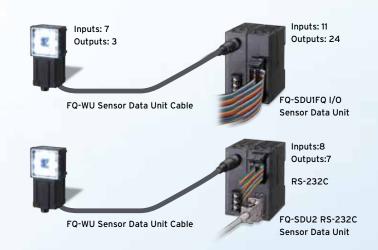

EtherNet/IP

Compatible Models

OMRON PLCs: CS, CJ1, CJ2, CP1 and NSJ Series

Compatible Models

OMRON Machine Programmable Controllers: NJ Series OMRON PLCs: CS, CJ1 and CJ2 Series

Setup Tools

We provide two tools for configuration and monitoring of inspection images: the Touch Finder, which can be used onsite to change settings and which can be installed on a control panel, and the Touch Finder for PC software which is Windows XP/7 (32/64 bit compatible).

Touch Finder

This is a small monitor with a touch panel. It's durable, rugged design is shock-resistant and portable. It has passed our standard 1.3 m drop test.

PC Tool

Emulates TouchFinder functionality on a PC.

Hardware Advancements

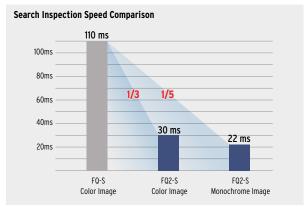

High-speed Image Processor

3X Faster than Previous Models

600 mHz Processor provides faster throughput times!

With our new high-speed image processor we are able to achieve a processing time of 50 ms or less for all primary inspection items.

* Processing may take longer than 50 ms depending on the settings.

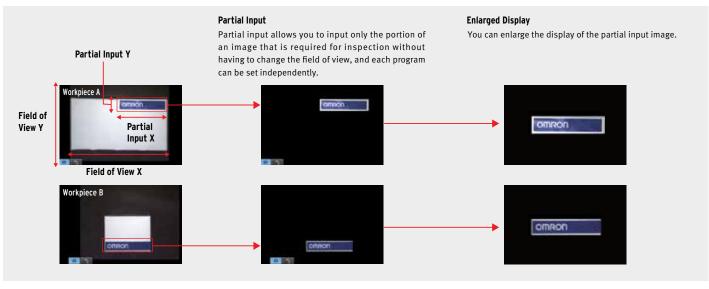

Note: This comparison was conducted with a 752×480 pixel image, with no rotational compensation.

Partial Input with DAP (Dual Axis Partial) Processing

Processing time can be further reduced by limiting the camera image size to an area focused for the inspection. Previous models allowed trimming only in the Y direction, but now you can specify a range across both the X and Y axes while keeping a wide field of view, trim the sections that are not required for inspection in each scene to reduce inspection time.

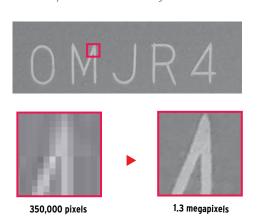

Megapixel CMOS Sensor 4 Times the Pixels

1,000 Times the Display Resolution

(Comparisons to previous OMRON models)

Precision 1.3 Megapixel Camera

Would you like a little more positioning accuracy? Do you need a wider field of view? We hear you, and that is why we have greatly improved the resolution of our camera. The 1.3 megapixels maintain precision and accuracy while also enabling a wider field of view.

1.3 Megapixels Color Monochrome

Sensor with C-mount

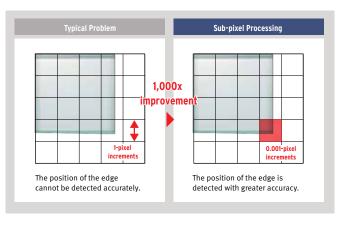

760,000 Pixels Color Monochrome

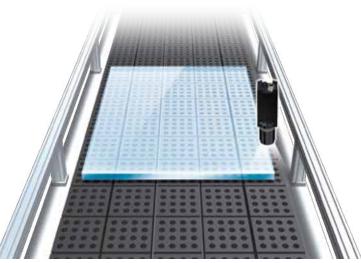

Integrated Sensor

*.350,000 pixels types are also available.

Sub-pixel Processing

Previously, position information could only be output on a per-pixel basis, but now you can output at a resolution even higher than the number of available pixels. This provides finer measurement values for travel distances and helps to improve positioning accuracy.

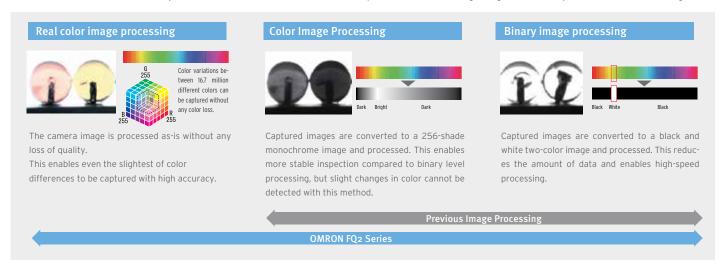

Three Key Technologies for Crystal Clear Images

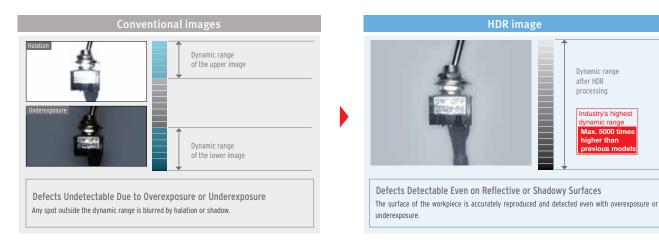

Real-color Sensing

Real-color processing is an image processing technology that performs high-speed processing of full-color images with a total of 16.7 million colors (256 tones per RGB channel). This means that image processing can be performed with the same color information that is visible to the human eye, and stable measurements can be performed under lighting that closely resembles natural light.

HDR Sensing

High dynamic range minimizes the effects of lighting such as halation and allows highly precise inspections.

ndustry's highest

Polarizing Filter + High-power Lighting

Lighting is required for stable image inspection, but shiny surfaces can reflect light, resulting in incorrect judgements. You can use a polarizing filter to reduce specular reflection, but the entire image will be darker, which can result in insufficient image contrast.

The FQ2 Series is equipped with OMRON's own high-power lighting DR optical system for effective use of LED power. This system provides sufficient lighting for inspection even when the enclosed polarizing filter is used.

Useful Onsite Utilities

Real-time Threshold Adjustment

The FQ2 smart camera allows fast and easy judgement adjustment. This eliminates the need to stop the machine for fine tuning of settings, resulting in zero machine downtime.

Judgement conditions can be adjusted on the Touch Finder.

180° Inverted Image Display

Invert images by 180° when an image can only be taken in the incorrect orientation due to the position that the Sensor was mounted in.

Inspection History Logging

"Recent results logging" is very useful for tracking inspections, logged data can be checked on a time scale in graph form and used to adjust judgement conditions. File Logging is useful in documenting manufacturing history. Large inspection records can be saved on SD cards and used later for traceability.

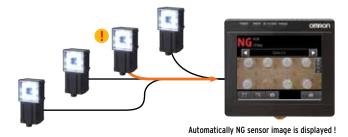

Password Protection

A password can be set to prevent changes to settings during operation by restricting the ability to change from Run Mode to Setup Mode.

Auto Detection

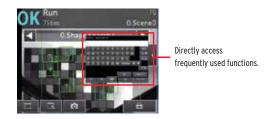

When multiple sensors are connected to the touch finder, the display automatically switches to the image of the sensor which has produced an NG result. This allows dynamic visualisation of reject conditions.

Note. When 32 sensors are connected, the most recent NG sensor of 8 sensors selected for display is displayed.

Shortcuts

Shortcuts to Setup Menu items that are changed frequently can be added to the Run Mode display. This enables the user to quickly perform adjustments when a problem occurs during operation.

Extension Tubes

Model	3Z4S-LE SV-EXR
Contents	Set of 7 tubes (40 mm, 20 mm,10 mm, 5 mm, 2.0 mm,1.0 mm, and 0.5 mm)
	Maximum outer diameter: 30 mm dia.

- * Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these ExtensionTubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0- mm or 2.0-mm Extension Tube are used together.
- * Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used.

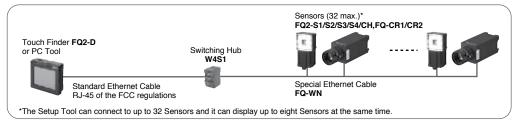

System Configuration

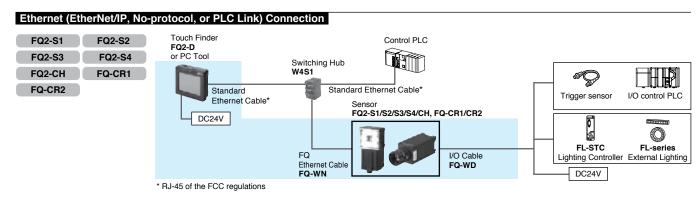

Up to 32 Sensors can be set up and monitored from a single Touch Finder or PC Tool.

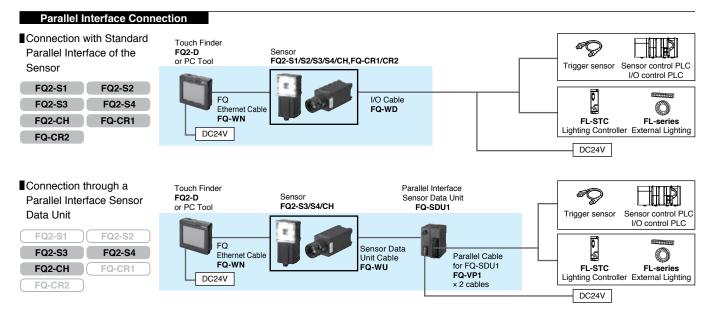

Various types of Sensors can be used at the same time.

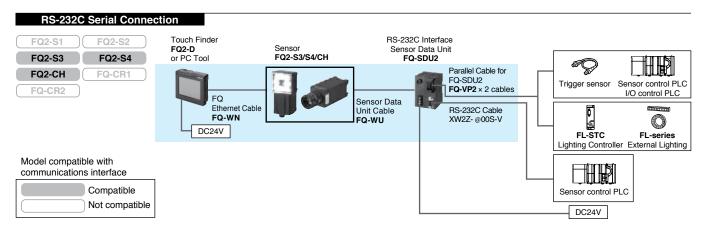

However, I/O type and wiring method vary depending on the Sensor, so select the necessary devices.

Note: Note: If you register as a member after purchasing a Sensor, you can download free setup software that runs on a PC and can be used in place of Touch Finder. Refer to the member registration sheet for details.

		Туре	Model with DC power supply	Model with AC/DC/battery power supply		
Item	Model		FQ2-D30	FQ2-D31		
Number of connectable Sensor		sor	Number of sensors that can be recognized (switched): 32 max. number or sensor that can displayed on monitor: 8 max.			
Types of measurement displays		neasurement displays	Last result display, Last NG display, trend monitor, histograms			
Main functions	Types of display images		Through, frozen, zoom-in, and zoom-out images			
wain functions	Data logging		Measurement results, measured images			
	Menu language		English, German, French, Italian, Spanish, Traditional Chinese, Simplified Chinese, Korean, Japanese			
		Display device	3.5-inch TFT color LCD			
	LCD	Pixels	320 × 240			
Indications		Display colors	16.7 million			
indications		Life expectancy *1	50,000 hours at 25°C			
	Backlight	Brightness adjustment	Provided			
		Screen saver	Provided			
Operation	Touch	Method	Resistance film			
interface	screen	Life expectancy *2	1,000,000 touch operations			
External	Ethernet	1	100BASE-TX/10BASE-T			
interface	SD card		SDHC-compliant, Class 4 or higher recommended			
Ratings	Power supply voltage		DC power connection:21.6 to 26.4 VDC (including ripple)	DC power connection: 21.6 to 26.4 VDC (including ripple) AC adapter (manufactured by Sino-American Japan Co., Ltd) connection: 100 to 240 VAC, 50/60 Hz Battery connection: FQ-BAT1 Battery (1cell, 3.7 V)		
	Continuous operation on Battery *3			1.5 h		
	Power consumption		DC power connection: 0.2 A max.	DC power connection: 0.2 A max. Charging battery: 0.4 A max.		
	Ambient temperature range		Operating: 0 to 50°C Storage: -25 to 65°C (with no icing or condensation)	Operating: 0 to 50°C when mounted to DIN Track or panel Operation on Battery: 0 to 40°C Storage: -25 to 65°C (with no icing or condensation)		
Environmental	Ambient humidity range		Operating and storage: 35% to 85% (with no condensation)			
immunity	Ambient atmosphere		No corrosive gas			
·	Vibration resistance (destruction)		10 to 150 Hz, single amplitude: 0.35 mm, X/Y/Z directions 8 min each, 10 times			
	Shock resistance (destruction)		150 m/s ² 3 times each in 6 direction (up, down, right, left, forward, and backward)			
	Degree of	protection	IEC 60529 IP20 (when SD card cover, connector cap, or harness is attached)			
Weight	J		Approx. 270 g (without Battery and hand strap attached)			
Materials			Case: ABS			
Accessories inc	luded with 1	Touch Finder	Touch Pen (FQ-XT), Instruction Manual			
			-			

^{*1.} This is a guideline for the time required for the brightness to diminish to half the initial brightness at room temperature and humidity. The life of the backlight is greatly affected by the ambient temperature and humidity and will be shorter at lower or higher temperatures.
*2. This value is only a guideline. No guarantee is implied. The value will be affected by operating conditions.
*3. This value is only a guideline. No guarantee is implied. The value will be affected by the operating environment and operating conditions.

Weight			Approx. 150 g		
Accessories included with Sensor Data Unit		Data Unit	Instruction Manual		

Item Model	FQ-BAT1
Battery type	Secondary lithium ion battery
Nominal capacity	1,800 mAh
Rated voltage	3.7 V
Ambient temperature range	Operating: 0 to 40°C Storage: -25 to 65°C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)
Charging method	Charged in Touch Finder (FQ2-D31). AC adapter (FQ-AC@) is required.
Charging time *1	2 h
Usage time *1	1.5 h
Battery backup life (See note 2.)	300 charging cycles
Weight	50 g max.

System Requirements for PC tool for FQ

The following Personal Computer system is required to use the software.

os	Microsoft Windows XP Home Edition/Professional SP2 or higher (32-bit version) Microsoft Windows 7 Home Premium or higher (32-bit/64-bit version)
CPU	Core 2 Duo 1.06 GHz or the equivalent or higher
RAM	1GB min.
HDD	500 MB min. available space *
Monitor	$1,024 \times 768$ dots min.

^{*.} Available space is also required separately for data logging.

Windows is registered trademarks of Microsoft Corporation in the USA and other countries. Other company names and product names in this document are the trademarks or registered trademarks of their respective companies.

This value is only a guideline. No guarantee is implied. The value will be affected by operating conditions
This is a guideline for the time required for the capacity of the Battery to be reduced to 60% of the initial capacity. No guarantee is implied. The value will be affected by the operating environment and operating conditions.

Meaning of Optical Chart

The X axis of the optical chart shows the field of vision (mm) (See Note.), and the Y axis of the optical chart shows the camera installation distance (mm).

Note: The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
