Description :

The GLT6100L08 is a low power CMOS Static RAM organized as 131,072 words by 8 bits. Easy memory expansion is provided by an active LOW $\overline{CE1}$, an active HIGH CE2, an active LOW OE, and Tri-state I/O's. This device has an automatic power-down mode feature when deselected.

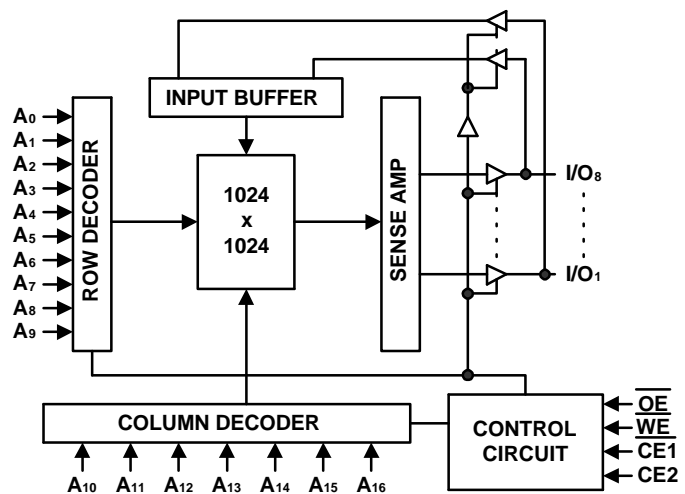

Writing to the device is accomplished by taking chip Enable 1 ($\overline{CE1}$) with Write Enable (\overline{WE}) LOW, and Chip Enable 2 (CE2) HIGH. Reading from the device is performed by taking Chip Enable 1 ($\overline{CE1}$) with Output Enable (\overline{OE}) LOW while Write Enable (\overline{WE}) AND Chip Enable 2 (CE2) is HIGH. The I/O pins are placed in a high-impedance state when the device is deselected : the outputs are disabled during a write cycle.

The GLT6100L08 comes with a 2V data retention feature and Lower Standby Power. The GLT6100L08 is available in a 32-pin TSOP1 / sTSOP / 48-fpBGA packages.
