### Features

- This Circuit is Processed in Accordance to Mil-Std-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Radiation Hardened
  - Functional Total Dose Exceeds  $1 \times 10^5$  RAD Si
- Pin for Pin Compatible with Intersil HI-3XX Series Analog Switches
- Analog Signal Range 15V
- Low Leakage
- Low  $R_{ON}$
- No Latch Up
- Versions for 5V and 15V Digital Systems
- Low Operating Power
- Military Temperature Range  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$

### Applications

- Sample and Hold i.e. Low Leakage Switching
- Op Amp Gain Switching i.e. Low ON Resistance
- Switched Capacitor Filters
- Low Level Switching Circuits
- Satellites
- Nuclear Reactor Controls
- Military Environments

### Description

The HS-3XXRH/883S family of analog switches are monolithic devices fabricated using Radiation Hardened CMOS technology and the Intersil dielectric isolation process for latch-up free operation. Improved total dose hardness is obtained by layout (thin oxide tabs extending to a channel stop) and processing (hardened gate oxide). These switches offer low-resistance switching performance for analog voltages up to the supply rails. "ON" resistance is low and stays reasonably constant over the full range of operating voltage and current. "ON" resistance also stays reasonably constant when exposed to radiation, being typically  $30\Omega$  pre-rad and  $35\Omega$  post 100K RAD-Si. All devices provide break-before-make switching.

The 6 devices in this switch series are differentiated by type of switch action, pinout and digital logic levels. The HS-302/303/384/390RH/883S switches have 5V digital inputs while the HS-306/307RH/883S switches have 15V digital inputs. All devices are available in Ceramic Flatpack and SBDIP packages. The HS-3XXRH/883S switches can directly replace the HI-3XX series devices.

**NOTES:**

1. Failures from subgroup 1, 7 and deltas are used for calculating PDA. The maximum allowable PDA = 5% with no more than 3% of the failures from subgroup 7.
2. Radiographic (X-Ray) inspection may be performed at any point after serialization as allowed by Method 5004.
3. Alternate Group A testing may be performed as allowed by MIL-STD-883, Method 5005.
4. Data Package Contents:
  - Cover Sheet (Intersil Name and/or Logo, P.O. Number, Customer Part Number, Lot Date Code, Intersil Part Number, Lot Number, Quantity).
  - Wafer Lot Acceptance Report (Method 5007). Includes reproductions of SEM photos with percent of step coverage.
  - GAMMA Radiation Report. Contains Cover page, disposition, Rad Dose, Lot Number, Test Package used, Specification Numbers, Test equipment, etc. Radiation Read and Record data on file at Intersil.
  - X-Ray report and film. Includes penetrometer measurements.
  - Screening, Electrical, and Group A attributes (Screening attributes begin after package seal).
  - Lot Serial Number Sheet (Good units serial number and lot number).
  - Variables Data (All Delta operations). Data is identified by serial number. Data header includes lot number and date of test. (See Table 6)
  - Group B and D attributes and/or Generic data.
  - The Certificate of Conformance is a part of the shipping invoice and is not part of the Data Book. The Certificate of Conformance is signed by an authorized Quality Representative.
