## Octal 3-State Noninverting Buffer/Line Driver/Line Receiver <br> High-Speed Silicon-Gate CMOS

The IN74ACT241 is identical in pinout to the LS/ALS241, HC/HCT241. The IN74ACT241 may be used as a level converter for interfacing TTL or NMOS outputs to High Speed CMOS inputs.

This octal noninverting buffer/line driver/line receiver is designed to be used with 3-state memory address drivers, clock drivers, and other bus-oriented systems. The device has noninverting outputs and two output enables. Enable A is active-low and Enable B is active-high.

- TTL/NMOS Compatible Input Levels
- Outputs Directly Interface to CMOS, NMOS, and TTL
- Operating Voltage Range: 4.5 to 5.5 V
- Low Input Current: $1.0 \mu \mathrm{~A} ; 0.1 \mu \mathrm{~A} @ 25^{\circ} \mathrm{C}$
- Outputs Source/Sink 24 mA

${ }^{*} V_{\text {IN }}$ from 0.8 V to 2.0 V

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, $\mathrm{V}_{\text {IN }}$ and $\mathrm{V}_{\text {OUT }}$ should be constrained to the range $\mathrm{GND} \leq\left(\mathrm{V}_{\text {IN }}\right.$ or $\mathrm{V}_{\text {OUT }} \leq \mathrm{V}_{\text {CC }}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or $\mathrm{V}_{\mathrm{CC}}$ ). Unused outputs must be left open.
