**CMOS IC**

## 300mA CMOS LDO

### ■ DESCRIPTION

The UTC **L1183B** is a positive, linear regulator. One of the feature is the very low ground current typically as low as  $30\mu A$ , and the dropout voltage is extremely low. For stable operation, the output capacitance value should be  $2.2\mu F$  or more.

The internal circuit includes thermal shutdown and current fold-back device to prevent device failure when the circuit is operated in bad conditions.

The UTC **L1183B** is generally suitable for applications, such as instrumentation, portable electronics, wireless devices, cordless phones, PC peripherals, battery powered widgets.
