

Infrared LED

L2791 series

Small emission spot LED using current confined chip

L2791 is infrared LED with a microball lens cemented to the current confined chip surface. This combination ensures high directivity and improved emission uniformity. In particular, L2791-02 uses a lens cap that delivers even narrower directivity. As a variant type not using a microball lens, L2791-03 is also available with the LED chip potted with resin, which gives a small emission spot of $\phi 160 \mu\text{m}$.

Features

- Small emission spot
L2791 : $\phi 400 \mu\text{m}$
L2791-03: $\phi 160 \mu\text{m}$
- Uniform emission: L2791/-02
- Narrow directivity: L2791/-02

Applications

- Automatic control systems
- Optical switches
- Auto-focus
