DATA SHEET

LA74302FN — Monolithic Linear IC Audio Interface for DSC

Overview

The LA74302FN is a SPEAKER AMP and MIC AMP built-in audio interface for DSC.

Functions

- Three-wire type SERIAL communications, MIC AMP
- MIC power supply provided
- ALC (ALC LEVEL: level changeover in three stages possible)
- REC/PB LPF (fc=4kHz: 3rd order)
- LINE output (with SERIAL MUTE)
- SPEAKER AMP (compatible with BEEP input MIX)
- With serial communications control electronic VOLUME

Specifications

Maximum Ratings at Ta=25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC} max		5.0	V
Allowable power dissipation	P _d max	T _a ≤85°C *	500	mW
Operating temperature	T _{opr}		-15 to +85	°C
Storage temperature	T _{stg}		-55 to +150	°C

* Substrate mounting condition (30mm × 50mm × 0.8mm: glass epoxy) 2S2P

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

POWER ON Condition (SERIAL communication)

The POWER ON RESET condition continues up to the second C.S rising (③) entered after falling (②) of POWER ON PULSE (①) generated inside IC at a time of power ON.
 Actually, because of delay of several hundreds NS in the IC, the first DATA condition begins in (④) and the normal SERIAL communication condition begins after (④).
