

The LM78L00 Series of positive voltage regulators are inexpensive, easy-to-use devices suitable for a multitude of applications that require a regulated supply of up to 100mA. Like their higher powered LM7800 Series cousins, these regulators feature internal current limiting and thermal shutdown making them remarkably rugged. No external components are required with the LM78L00 devices in many applications.

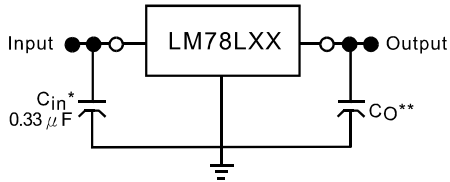

These devices offer a substantial performance advantage over the traditional zener diode-resistor combination, as output impedance and quiescent current are substantially reduced.

FEATURES

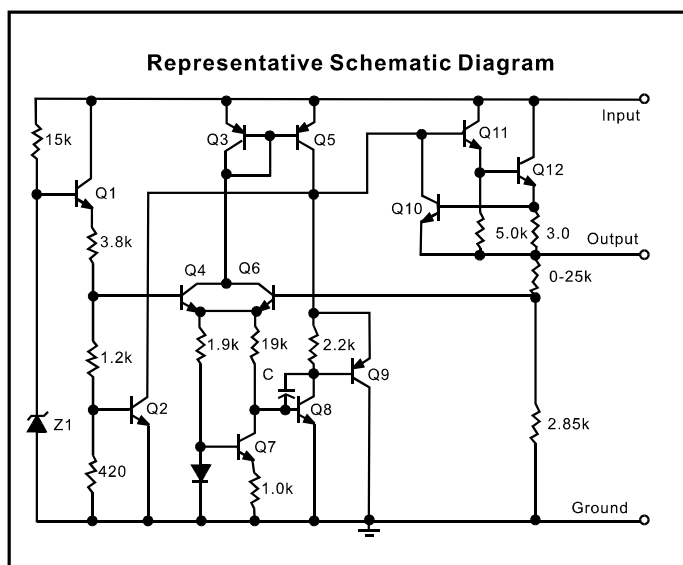

- Wide Range of Available, Fixed Output Voltage.
- Low Cost.
- Internal Short Circuit Current Limiting.
- Internal Thermal Overload Protection.
- No External Components Required.
- Complementary Negative Regulators Offered. (LM79L00 Series)

Standard Application

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0V above the output voltage even during the low point on the input ripple voltage.

* C_{in} is required if regulator is located in appreciable distance from power supply filter.
 ** C_o is not needed for stability; however, it does improve transient response.

ORDERING INFORMATION

<i>Device</i>	<i>Operating Temperature Range</i>	<i>Package</i>
LM78LxxLP	0° ~ +125 °C	TO-92
LM78LxxD	0° ~ +125 °C	SOP-8
LM78LxxH	0° ~ +125 °C	SOT-89

LM78L05 ELECTRICAL CHARACTERISTICS AT SPECIFIED VIRTUAL JUNCTION TEMPERATURE, $V_I=10V, I_O = 40mA$ (unless otherwise noted)

* Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into account separately. All characteristics are measured with a $0.33 \mu\text{F}$ capacitor across the input and a $0.1 \mu\text{F}$ capacitor across the output.

** This specification applies only for dc power dissipation permitted by absolute maximum ratings.
