LV71081E — For Video/Audio Signal Input/ Output Interface of DVD Recorder

Overview

The LV71081E is for video/audio signal input/output interface of DVD recorder.

Functions

- Video audio canal SW
- S signal 3 input switch
- 6dB amplifier
- 6MHz/12MHz/27MHz-LPF / 6MHz/12MHz/27MHz low pass filter
- 6ch video driver (AV1, AV2, Line output, R•G•B output)
- Video signal detection
- Composite sync output

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage 1	$V_{CC\ max}$		6.0	V
Maximum supply voltage 2	$V_{CC\ max}$		13.0	V
Allowable power dissipation	$P_d\ max$	$T_a \leq 75^\circ\text{C}$ Mounted on a specified board *	1200	mW
Operating temperature	T_{opr}		-20 to +75	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +150	$^\circ\text{C}$

* Mounted on a specified board : 114.3mm × 76.1mm × 1.6mm, glass epoxy

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

SANYO Semiconductor Co., Ltd.

Graphical View of Audio Block Power Supply

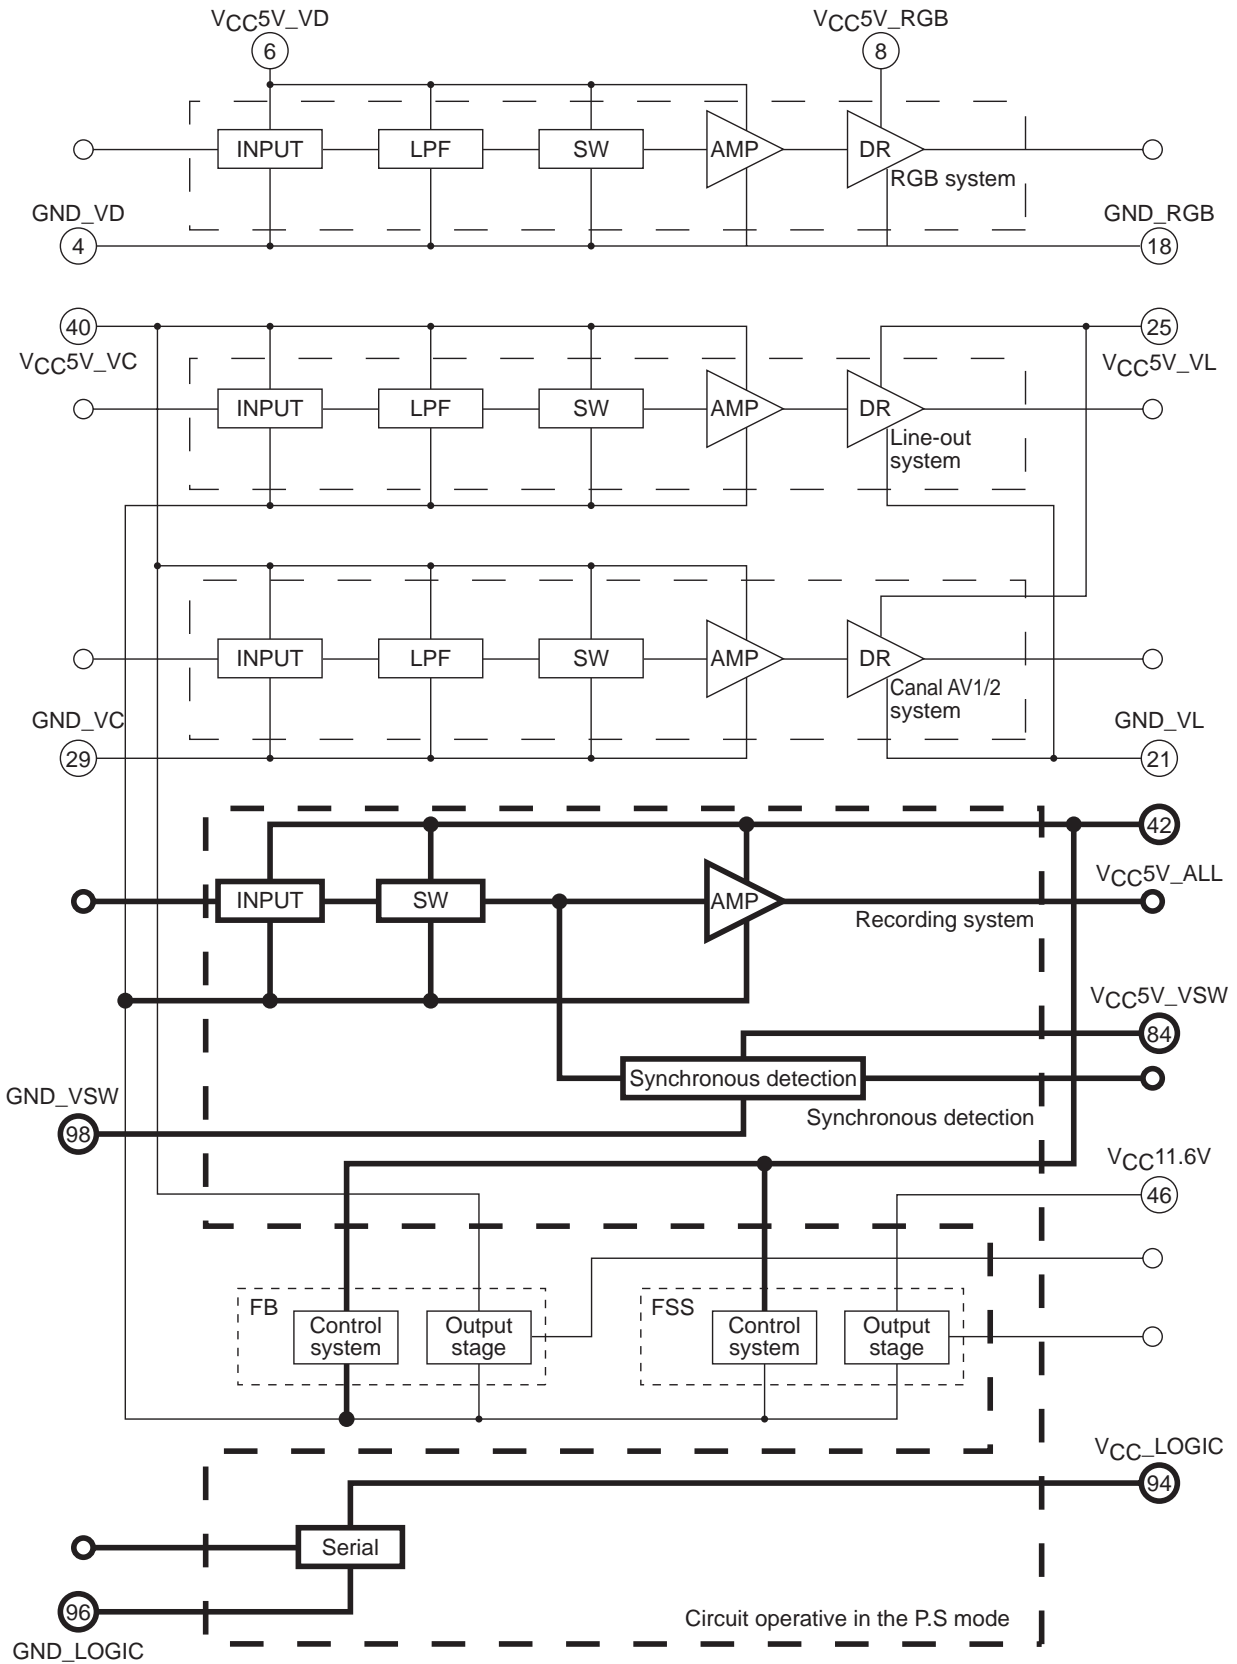

LV71081E

Graphical View of The Video Block Power Supply

* The thick line indicates the circuit operative in the power save mode.

In the power save mode, 5V is applied to Pin 42 (V_{CC5_All}), pin 84 (V_{CC5V_VSW}), and pin 94 (V_{CC_LOGIC}) only.

Test Circuit

Cautions for Use

1. Drive capacity of video driver

Line and component outputs can drive two system through capacitive coupling.

Scart output can drive one system only through DC coupling.

2. Application not using the SAG correction function in the video driver with SAG correction

When the SAG correction function is not to be used in the video driver with SAG correction, short-circuit output and correction pins for output through capacitive coupling.

Application using SAG correction function

Application without using SAG correction function

3. Treatment of the pin when Audio RF_MOD output is not used

When RF MOD OUT (Pin76) is not used, it is recommended to pull up the ALC filter pin (pin77) to V_{CC} (11.6V).

4. Audio Mute

This IC incorporates a mute transistor to reduce the POP noise of audio output when power is turned ON/OFF.

Mute control can be made by serial control.

5. Resistor to limit the Audio input

When the large signal is input in the input pin with power OFF, cross-talk between input and output occurs through the protective diode and parasitic elements. Because of the structure of LSI, such cross-talk is difficult to avoid. If cross-talk at a time of power OFF presents a problem, the cross-talk amount can be reduced by inserting the limiting resistor in the input. In this case, the input signal level changes depending on the resistance value. Determine the constant while taking both the cross-talk amount and input level into account.

6. Pin treatment when external control is not to be used

When external control pins (Pins 13, 36, and 38) are not used, pull-down to GND is recommended.

7. Pin treatment of N.C pin

It is recommended to connect N.C. pins (Pins 67, 68, 69, and 70) directly to the GND.

8. Audio 9V_REG pin external capacitance

Use the Audio 9V_REG pins (pins 57 and 66) external capacitance of 10µF or more and with the equivalent series resistance component of 7Ω or less.

9. Power application and disconnection sequences

The recommended power application sequence to this IC is V_{CC}ALL5V (Pin42) → V_{CC}5V (Pins 6, 8, 25, 40, 84 and 94), V_{CC}11.6V (Pin46).

(No particular order is established between V_{CC}5V and V_{CC}11.6V.) It is recommended to reverse the above sequence when power supply is turned OFF.

4. INITIALIZE AND OTHERS

SW LSI is initialized as the following mode for circuit protection. Please see “SERIAL CONTROL TABLE”.

Characteristics of the SDA and SCL I/O stages for SW LSI

Parameter	Symbol	Min	Max	Unit
LOW level input voltage	V_{IL}	0	0.8	V
HIGH level input voltage	V_{IH}	3.0	5.0	V
LOW level output current	I_{OL}		3.0	mA
SCL clock frequency	f_{SCL}		400	kHz
Set-up time for a repeated START condition	$t_{SU:STA}$	0.6		μs
Hold time START condition. After this period, the first clock pulse is generated.	$t_{HD:STA}$	0.6		μs
LOW period of the SCL clock	t_{LOW}	1.3		μs
Rise time of both SDA and SDL signals	t_R	0	0.3	μs
HIGH period of the SCL clock	t_{HIGH}	0.6		μs
Fall time of both SDA and SDL signals	t_F	0	0.3	μs
Data hold time:	$t_{HD:DAT}$	0	0.9	μs
Data set-up time	$t_{SU:DAT}$	100		ns
Set-up time for STOP condition	$t_{SU:STO}$	0.6		μs
BUS fredd time between a STOP and START condition	t_{BUF}	1.3		μs

Fig.2 Definition of timing.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of September, 2010. Specifications and information herein are subject to change without notice.
