## LX550 SERIES

Flexible single and multiple outputs

- 550W continuous output power
- Industry standard footprint, low profile
- Conducted noise to meet EN55022 class B
- AC and DC input voltage options in same package
- Efficiency up to 88\%
- Optional power sharing/VME signals

## - Autoranging input

The LX550 family offers 550 Watts of continuous output power in a low profile industry standard footprint. Cover and fan assembly and over temperature protection are fitted as standard. With two standard single output options, and a flexible standard multiple output, the series can address most power requirements as standard. The design is specifically tailored to allow full flexibility, and modifications to meet customer applications can be implemented with ease. The LX550 AC input series meet the safety requirements of EN60950, VDE0805, UL1950 and CSA C22.2 No. 950. Input conducted noise levels meet the requirements of EN55022 class B. LX550 series power supplies are ideal for use in high power industrial applications and are particularly suitable for front end power systems.

SPECIFICATION All specifications are typical at nominal input, full load at $25^{\circ} \mathrm{C}$ unless otherwise stated

| OUTPUT SPECIFICATIONS |  |  |
| :---: | :---: | :---: |
| Voltage adjustability | Vout on singles +5 V output on multiple | $\begin{array}{r} -8 \% /+16 \% \\ \pm 20 \% \end{array}$ |

## OVERLOAD/SHORT CIRCUIT PROTECTION

The overload/short circuit protection mechanisms are different for the single output models and the multiple output model.
The single output models will current limit when the output load reaches 105-120\% of maximum load during overload or short circuit conditions. The unit will operate in a constant current mode making the single output models suitable for battery charging applications.
The multiple output model uses a power limiting function. When the total output power reaches 600W the outputs will foldback to the values detailed below:

| Output | Foldback Value |
| :--- | :--- |
|  | 30 A continuous |
| +12 V | 8 A continuous |
| +24 V | 4 A continuous |
| $-5 \mathrm{~V} /-12 \mathrm{~V}$ | Protected by 4A Multi Fuse ${ }^{\text {TM }}$ |

The outputs will not foldback until the total output power exceeds the maximum power limits. This allows the units to have a peak power capability but it requires that care must be taken not to permanently overload any individual output. The $+5 \mathrm{~V},+12 \mathrm{~V}$ and +24 V outputs are not individually protected and it is recommended that the maximum continuous load does not exceed the value given in the output specifications. The -5 V and -12 V outputs are individually protected by a 4A Multi Fuse ${ }^{T M}$ and the maximum continuous load should not exceed the value given in the output specifications.

## Notes:

1 The multiple output LX550 has a continuous output power rating of 550W. The single-output versions have a continuous power output rating of 570W. The LX550 cannot operate without fan cooling.
2 Peak power figures for individual outputs on the multiple output unit are for less than 10 seconds duration. Total output power should not exceed 550W.
3 Fan fitted as standard, see maximum output current specifications.
4 Single output models are adjustable $-8 \%,+16 \%$.
5 A 10\% load on the main output is necessary to maintain regulation on the auxiliaries at full load (multiple output model).
6 The input board is fitted with an autorange circuit as standard which automatically senses the input voltage and switches to the appropriate voltage range.
7 Over temperature protection is provided by a thermal switch fitted to the main transformer. After thermal shutdown $\left(90^{\circ} \mathrm{C}\right)$ the unit must be powered down and the thermal switch must be allowed cool to $70^{\circ} \mathrm{C}$ before power up.
8 This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

## Options

- DC input models for 24 V and 48 V operation are detailed on page 170.
- A signals board is available as an option. To order, add the suffix '-S', see table below.

| OPTIONS | SUFFIX | EXAMPLE |
| :---: | :---: | :---: |
| None |  | LX550-7620 |
| Signals | - S | LX550-7620-S |

## SIGNALS (OPTIONAL)

An optional signals board supplies the following VME utility bus signals: $\overline{\mathrm{ACF}}$ (AC Fail) Logic 1 to 0 transition occurs $>10 \mathrm{~ms}$ before outputs fall below $90 \%$ of nominal in the event of input failure.
$\overline{\overline{D C F}}$ (DC Fail) Logic 0 occurs if output falls below $<85 \%-95 \%$ of nominal.
SRS (System Reset) Logic 1 for system OK (AC and DC good and reset times [200ms])
PM Power Monitor signal, proportional to the output power, ratio of $10 \mathrm{mV} / \mathrm{W}$.
PS Power Share connections, to be joined for parallel operation of two or more units, ensuring equal power share. For power share operation unit outputs need to be set to $\pm 5 \%$ of each other and should be connected in star configurations with the load as star centre.

## 550 Watt AC/DC universal input switch mode power supplies

## Mechanical Notes

A Input and output connectors are 15 way terminal block, 5 mm pitch. 3 way and 11 way 9.5 mm barrier strip with M $4 \times 8$ fixings, 250 V 20A. Signals board connector is 8 way, single row right angle $0.1^{\prime \prime}$, M olex 910210128, this mates with 901471108 or equivalent.
B Customer fixing screws (A) are M3 isometric. They must not penetrate into unit by more than 5 mm .

ALL DIMENSIONS IN INCHES (mm)
DERATING CURVE (See Note 3, 4)
Output Power (Watts)

## International Safety Standard Approvals:

Multiple output and 24 V Single output units are approved to these standards. Safety approval pending for 48 V output model.
