**CK98 (100/133 MHz) spread spectrum  
system clock generator**

Product specification

2001 Apr 02

ICL03 — PC Motherboard ICs; Logic Products Group

# CK98 (100/133 MHz) spread spectrum system clock generator

## PCK2014A

### FEATURES

- ESD classification testing is done to JEDEC Standard JESD22. Protection exceeds 2000 V to HBM per method A114.
- Latch-up testing is done to JEDEC Standard JESD78 which exceeds 100 mA.
- Mixed 2.5 V and 3.3 V operation
- Six CPU clocks at 2.5 V
- Six PCI clocks at 3.3 V, one free-running (synchronous with CPU clocks)
- Two 3.3 V fixed clocks @ 66 MHz
- Three 2.5 V IOAPIC clocks @ 16.67 MHz
- One 3.3 V 48 MHz USB clock
- Two 3.3 V reference clocks @ 14.318 MHz
- Reference 14.31818 MHz Xtal oscillator input
- 133 MHz or 100 MHz operation
- Power management control input pins
- CPU clock jitter  $\leq 150$  ps cycle-cycle
- CPU clock skew  $\leq 175$  ps pin-pin
- 0.0 ns – 1.5 ns CPU - 3V66 delay
- 1.5 ns – 3.5 ns 3V66 - PCI delay
- 1.5 ns – 4.0 ns CPU - IOAPIC delay
- 1.5 ns – 4.0 ns CPU - PCI delay
- Available in 56-pin SSOP package
- $\pm 0.6\%$  Center spread spectrum capability via select pins
- $-0.6\%$  Down spread spectrum capability via select pins

### DESCRIPTION

The PCK2014A is a clock generator (frequency synthesizer) chip for a Pentium III and other similar processors.

The PCK2014A has six CPU clock outputs at 2.5 V, two 3V66 clocks running at 66 MHz. there are six PCI clock outputs running at 33 MHz. Additionally, the part has three 2.5 V IOAPIC clock outputs at 16.67 MHz and two 3.3 V reference clock outputs at 14.318 MHz. All clock outputs meet Intel's drive strength, rise/fall time, jitter, accuracy, and skew requirements.

The part possesses dedicated power-down,  $\overline{\text{CPUSTOP}}$ , and  $\overline{\text{PCISTOP}}$  input pins for power management control. These inputs are synchronized on-chip and ensure glitch-free output transitions. When the  $\overline{\text{CPUSTOP}}$  input is asserted, the CPU clock outputs and 3V66 clock outputs are driven LOW. When the  $\overline{\text{PCISTOP}}$  input is asserted, the PCI clock outputs are driven LOW.

Finally, when the  $\overline{\text{PWRDWN}}$  input pin is asserted, the internal reference oscillator and PLLs are shut down, and all outputs are driven LOW.

### PIN CONFIGURATION

### ORDERING INFORMATION

PACKAGES	TEMPERATURE RANGE	ORDER CODE	DRAWING NUMBER
56-pin plastic SSOP	0 to +70 °C	PCK2014ADL	SOT371-1

# CK98 (100/133 MHz) spread spectrum system clock generator

PCK2014A

## PIN DESCRIPTION

PIN NUMBER	SYMBOL	FUNCTION
2, 3	REF [0–1]	3.3 V 14.318 MHz clock output
5	XTAL_IN	14.318 MHz crystal input
6	XTAL_OUT	14.318 MHz crystal output
9, 11, 12, 14, 15, 18	PCI_[F, 1–5]	3.3 V PCI clock outputs, pin 9 is a free running PCI clock
25, 26	3V66 [0–1]	3.3 V fixed 66 MHz clock outputs
28	SEL133/100	Select input pin for enabling 133 MHz or 100 MHz CPU outputs. H = 133 MHz, L = 100 MHz
30	48 MHz USB	3.3 V fixed 48 MHz clock output
32, 33	SEL [0–1]	Logic select pins. TTL levels.
34	SPREAD	3.3 V LVTTTL input. Enables spread spectrum mode when held LOW.
35	PWRDWN	3.3 V LVTTTL input. Device enters powerdown mode when held LOW.
36	CPUSTOP	3.3 V LVTTTL input. Stops all CPU clocks and 3V66 clocks when held LOW. CPUDIV_2 output remains on all the time.
37	PCISTOP	3.3 V LVTTTL input. Stops all PCI clocks except PCICLK_F when held LOW.
41, 42, 45, 46, 49, 50	CPUCLK [0–5]	2.5 V CPU output. 133 MHz or 100 MHz depending on state of input pin SEL133/100.
53, 54, 55	APIC [0–2]	2.5 V clock outputs running divide synchronous with the CPU clock frequency. Fixed 16.67 MHz limit.
4, 10, 16, 17, 22, 23, 27, 31, 39	V <sub>DD3V</sub>	3.3 V power supply, pins 22 and 23 are analog V <sub>DD</sub> .
1, 7, 8, 13, 19, 20, 21, 24, 29, 38, 40, 44, 48, 52	V <sub>SS</sub>	Ground, pins 20 and 21 are analog V <sub>SS</sub> .
43, 47, 51, 56	V <sub>DD25V</sub>	2.5 V power supply

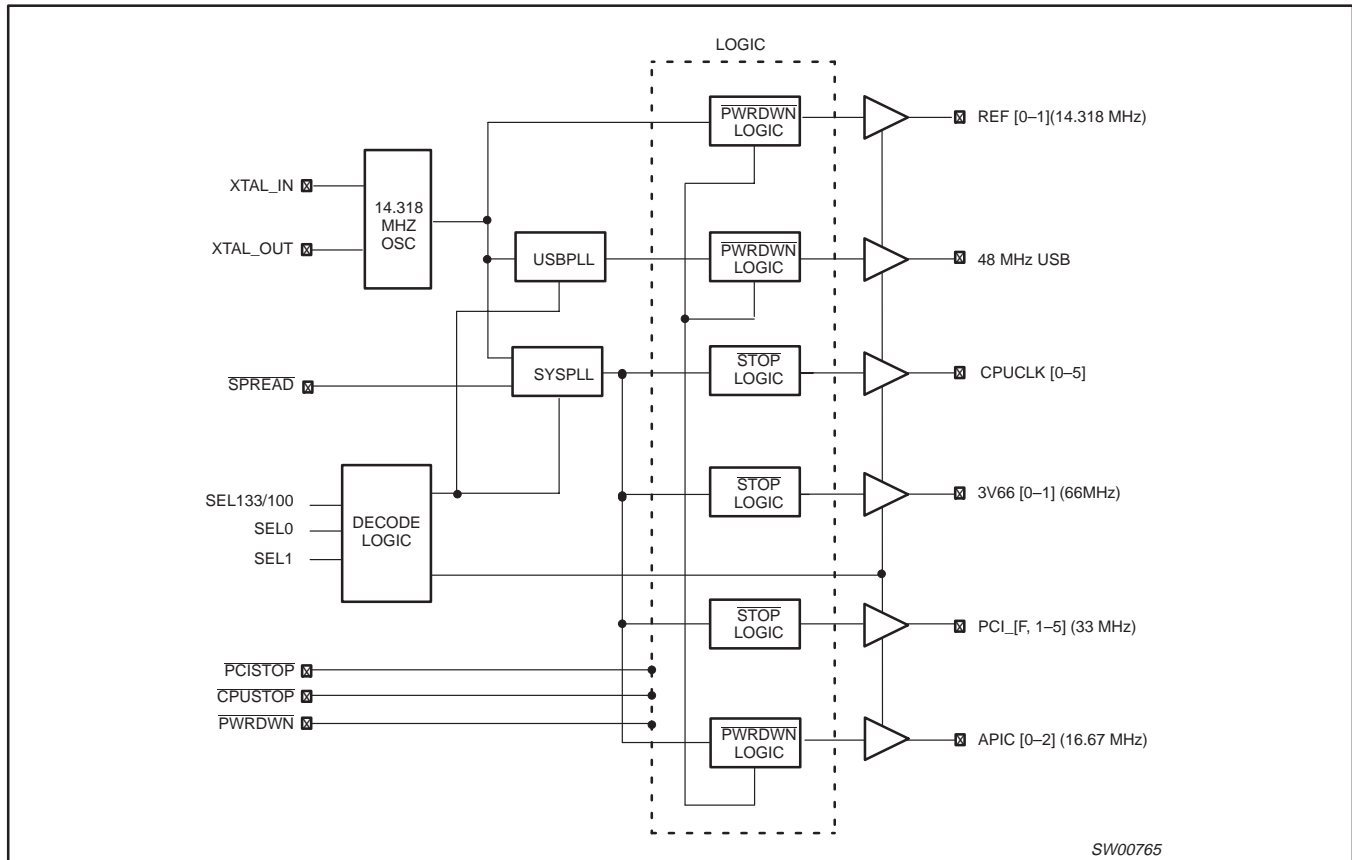

### NOTE:

- V<sub>DD3V</sub>, V<sub>DD25V</sub> and V<sub>SS</sub> in the above table reflects a likely internal POWER and GROUND partition to reduce the effects of internal noise on the performance of the device. In reality, the platform will be configured with the V<sub>DD25V</sub> pins tied to a 2.5 V supply, all remaining V<sub>DD</sub> pins tied to a common 3.3 V supply and all V<sub>SS</sub> pins being common.
- Pins 20 and 21 are analog ground and should be tied to a ground plane. Pins 22 and 23 are analog V<sub>DD</sub> should be properly decoupled to a 3.3 V supply. These analog power supply pins should not be tied to the PCI power and ground to avoid noise coupling into the analog power supply pins. The PCK2014 provides separate power supplies for the internal digital circuitry (pin 39, V<sub>CC</sub>) and the internal PLLs of the device (pins 22 and 23, V<sub>CC</sub>). The purpose of this approach is to try and isolate the high switching noise digital outputs from relatively sensitive analog blocks. In controlled environments such as a test board this level is very well controlled. However, in a mixed signal environment, a second level of isolation may be required.

## FUNCTION TABLE

SEL 133/100	SEL1	SEL0	CPU	3V66	PCI	48 MHz	REF	IOAPIC	NOTES
0	0	0	HI-Z	HI-Z	HI-Z	HI-Z	HI-Z	HI-Z	1
0	0	1	100 MHz	66 MHz	33 MHz	48 MHz	14.318 MHz	16.67 MHz	2
0	1	0	100 MHz	66 MHz	33 MHz	HI-Z	14.318 MHz	16.67 MHz	3
0	1	1	100 MHz	66 MHz	33 MHz	48 MHz	14.318 MHz	16.67 MHz	4, 7, 8
1	0	0	TCLK/2	TCLK/4	TCLK/8	TCLK/2	TCLK	TCLK/16	5, 6
1	0	1	133 MHz	66 MHz	33 MHz	48 MHz	14.318 MHz	16.67 MHz	2
1	1	0	133 MHz	66 MHz	33 MHz	HI-Z	14.318 MHz	16.67 MHz	3
1	1	1	133 MHz	66 MHz	33 MHz	48 MHz	14.318 MHz	16.67 MHz	4, 7, 8

### NOTES:

1. Required for board level "bed-of-nails" testing.
2. Philips center spread mode.
3. 48 MHz PLL disabled to reduce component jitter. 48 MHz outputs to be held Hi-Z instead of driven to LOW state.
4. "Normal" mode of operation.
5. TCLK is a test clock over driven on the XTALIN input during test mode. TCLK mode is based on 133 MHz CPU select logic.
6. Required for DC output impedance verification.
7. Frequency accuracy of 48 MHz must be +167 PPM to match USB default.
8. Range of reference frequency allowed is MIN = 14.316 MHz, NOMINAL = 14.31818 MHz, MAX = 14.32 MHz

CLOCK OUTPUT	TARGET FREQUENCY (MHz)	ACTUAL FREQUENCY (MHz)	PPM
USBCLK <sup>7</sup>	48.0	48.008	167

## CLOCK ENABLE CONFIGURATION

CPUSTOP	PWRDWN	PCISTOP	CPUCLK	APIC	3V66	PCI	REF / 48 MHz	OSC	VCOs
X	0	X	LOW	LOW	LOW	LOW	LOW	OFF	OFF
0	1	0	LOW	ON	LOW	LOW	ON	ON	ON
0	1	1	LOW	ON	LOW	ON	ON	ON	ON
1	1	0	ON	ON	ON	LOW	ON	ON	ON
1	1	1	ON	ON	ON	ON	ON	ON	ON

### NOTES:

1. LOW means outputs held static LOW as per latency requirement below
2. ON means active.
3. PWRDWN pulled LOW, impacts all outputs including REF and 48 MHz outputs.
4. All 3V66 clocks as well as CPU clocks should stop cleanly when CPUSTOP is pulled LOW.
5. CPUDIV2, IOAPIC, REF, 48 MHz signals are not controlled by the CPUSTOP functionality and are enabled all in all conditions except when PWRDWN is LOW.

## POWER MANAGEMENT REQUIREMENTS

SIGNAL	SIGNAL STATE	LATENCY
		NO. OF RISING EDGES OF FREE RUNNING PCICLK
CPUSTOP	0 (DISABLED)	1
	1 (ENABLED)	1
PCISTOP	0 (DISABLED)	1
	1 (ENABLED)	1
PWRDWN	1 (NORMAL OPERATION)	3 ms
	0 (POWER DOWN)	2 MAX

### NOTES:

1. Clock ON/OFF latency is defined as the number of rising edges of free running PCICLKs between the clock disable goes HIGH/LOW to the first valid clock that comes out of the device.
2. Power up latency is when PWRDWN goes inactive (HIGH) to when the first valid clocks are driven from the device.

## ABSOLUTE MAXIMUM RATINGS<sup>1, 2</sup>

In accordance with the Absolute Maximum Rating System (IEC 134).

Voltages are referenced to  $V_{SS}$  ( $V_{SS} = 0$  V).

SYMBOL	PARAMETER	CONDITION	LIMITS		UNIT
			MIN	MAX	
$V_{DD3}$	DC 3.3 V core supply voltage		-0.5	+4.6	V
$V_{DDQ3}$	DC 3.3 V I/O supply voltage		-0.5	+4.6	V
$V_{DDQ2}$	DC 2.5 V I/O supply voltage		-0.5	+3.6	V
$I_{IK}$	DC input diode current	$V_I < 0$		-50	mA
$V_I$	DC input voltage	Note 2	-0.5	5.5	V
$I_{OK}$	DC output diode current	$V_O > V_{CC}$ or $V_O < 0$		±50	mA
$V_O$	DC output voltage	Note 2	-0.5	$V_{CC} + 0.5$	V
$I_O$	DC output source or sink current	$V_O = 0$ to $V_{CC}$		±50	mA
$T_{stg}$	Storage temperature range		-65	+150	°C
$P_{TOT}$	Power dissipation per package plastic medium-shrink (SSOP)	For temperature range: -40 to +125 °C above +55 °C derate linearly with 11.3 mW/K		850	mW

### NOTES:

- Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

## RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	CONDITIONS	LIMITS		UNIT
			MIN	MAX	
$V_{DD3V}$	DC 3.3 V core supply voltage		3.135	3.465	V

### NOTES:

- Output drivers must have monotonic rise/fall times through the specified  $V_{OL}/V_{OH}$  levels.
- Period, jitter, offset and skew measured on rising edge @ 1.25 V for 2.5 V clocks and @ 1.5 V for 3.3 V clocks.
- The PCI is the CPUCLK divided by four at CPUCLK = 133 MHz. The 3V66 CLK is internal VCO frequency divided by three at CPUCLK = 100 MHz.
- 3V66 CLK is internal VCO frequency divided by two at CPUCLK = 133 MHz. The 3V66 CLK is internal VCO frequency divided by three at CPUCLK = 100 MHz.
- $T_{HKH}$  is measured at 2.0 V for 2.5 V outputs, 2.4 V for 3.3 V outputs as shown in Figure 4.
- $T_{HKL}$  is measured at 0.4 V for all outputs as shown in Figure 4.
- The time is specified from when  $V_{DDQ}$  achieves its nominal operating level (typical condition  $V_{DDQ} = 3.3 \text{ V}$ ) until the frequency output is stable and operating within specification.
- $T_{HRISE}$  and  $T_{HFALL}$  are measured as a transition through the threshold region  $V_{OL} = 0.4 \text{ V}$  and  $V_{OH} = 2.4 \text{ V}$  for 3 V outputs,  $V_{OL} = 0.4 \text{ V}$ , and  $V_{OH} = 2.0 \text{ V}$  for 2.5 V outputs. (1 mA) JEDEC specification.
- The average period over any 1  $\mu\text{s}$  period of time must be greater than the minimum specified period.
- Calculated at minimum edge-rate (1 V/ns) to guarantee 45/55% duty-cycle. Pulse width is required to be wider at faster edge-rate to ensure duty-cycle specification is met.
- Output (see Figure 5 for measure points).

## AC WAVEFORMS

$V_M = 1.25\text{ V @ }V_{DDQ2}$  and  $1.5\text{ V @ }V_{DDQ3}$   
 $V_X = V_{OL} + 0.3\text{ V}$   
 $V_Y = V_{OH} - 0.3\text{ V}$   
 $V_{OL}$  and  $V_{OH}$  are the typical output voltage drop that occur with the output load.

## Data sheet status

Data sheet status	Product status	Definition [1]
Objective specification	Development	This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.
Preliminary specification	Qualification	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
Product specification	Production	This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.

[1] Please consult the most recently issued datasheet before initiating or completing a design.

## Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
