

**Product Features**

- Full 10-way crossbar
- Independent controls for all ports
- Multiple parts can be used for wider data paths
- Near-zero propagation delay
- 25Ω switches connect input to outputs
- Direct bus connection when switches are ON
- Ultra Low Quiescent Power (1mA Typical)
- Packages available:
  - 256-pin BGA (NA256)

**Applications**

- Digital network switching:
  - Hubs & Routers
  - ATM Switch Systems
  - Backbone Access Routing
  - Add Drop Multiplexing
- Multiprocessor systems switching
- Large memory bus switching
- Video signal routing & Image processing
- Telecommunications switching
- RAID systems bus switching

**Truth Table**

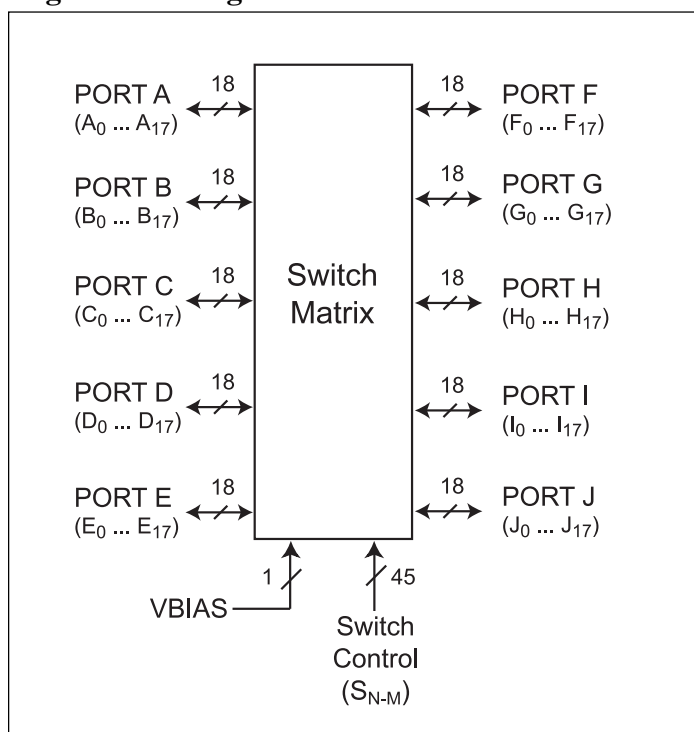

| Function                      | Pin              | State |
|-------------------------------|------------------|-------|
| Port N - Port M connected*    | S <sub>N-M</sub> | Low   |
| Port N - Port M disconnected* | S <sub>N-M</sub> | High  |

\* Specify low numbered port first

**Product Description**

Pericom's PI5X series of high density logic circuits are produced using the Company's advanced submicron CMOS technology to achieve industry leading performance.

The PI5X1018 is an 18-bit, 10-port crossbar switch designed with a low ON resistance allowing inputs to be connected directly to outputs. The crossbar creates a low propagation delay and adds low additional ground bounce noise. Switches are turned ON in groups of 18 allowing any combination of connected ports. An additional bias voltage pin, VBIAS, permits control of internal pull-up resistors that can be used for pin termination. Several of these devices can be grouped together for wider data and control paths.

**Logic Block Diagram**

**Product Pin Description**

| Pin Name                          | Description  |
|-----------------------------------|--|
| A0...A17 through J0...J17         | 180 Pins total. Dedicated to ten 18-bit ports.<br>Contains internal pull-up resistor controlled by pin V <sub>BIAS</sub> .   |
| S <sub>N-M</sub>                  | 45 Pins total. Dedicated to port switching. Where N is from A to I and M is from B to J and N < M.<br>Also, contains internal pull-up resistor controlled by pin V <sub>BIAS</sub> .   |
| V <sub>BIAS</sub>                 | Adjusts internal pull-up resistance value for all pins A-J & S <sub>N-M</sub> ;<br>(default value with internal bias voltage of 2.9V is around 20kΩ).<br>For V <sub>BIAS</sub> = 0V, pull-up resistor value is less than 5kΩ.<br>For V <sub>BIAS</sub> = 4.1V, pull-up resistor value is greater than 100kΩ. |
| V <sub>DD</sub> & V <sub>SS</sub> | 23 Pins dedicated to Power (V <sub>DD</sub> ) and Ground (V <sub>SS</sub> )  |
| NC                                | 6 Pins are No Connect  |

### Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested.)

|   |                 |
|---|-----------------|
| Storage Temperature .....                                     | -65°C to +150°C |
| Ambient Temperature with Power Applied .....                  | -40°C to +85°C  |
| Supply Voltage to Ground Potential (Inputs & Vcc Only) .....  | -0.5V to +7.0V  |
| Supply Voltage to Ground Potential (Outputs & D/O Only) ..... | -0.5V to +7.0V  |
| DC Input Voltage .....  | -0.5V to +7.0V  |
| DC Output Current .....                                       | 120mA           |
| Power Dissipation .....                                       | 0.5W            |

**Note:**

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

### DC Electrical Characteristics (Over the Operating Range, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$ , $V_{CC} = 4.5\text{V}$ to $5.5\text{V}$ )

| Parameters | Description                          | Test Conditions <sup>(1)</sup>                                      | Min.           | Typ. <sup>(2)</sup> | Max.      | Units         |
|------------|--------------------------------------|---|----------------|---------------------|-----------|---------------|

|            |                                      |   | All other bits |                     | 40        |               |

### Capacitance ( $T_A = 25^\circ\text{C}$ , $f = 1\text{MHz}$ )

| Parameters <sup>(5)</sup> | Description  | Test Conditions      | Typ. | Units |
|---------------------------|--|----------------------|------|-------|
| $C_{IN}$                  | Control Input Capacitance                              | $V_{IN} = 0\text{V}$ | 4    | pF    |
| $C_{OFF}$                 | Port Pin Capacitance, Port Disconnected                | $V_{IN} = 0\text{V}$ | 27   | pF    |
| $C_{ON}$                  | Port Pin Capacitance, Port Connected to One Other Port | $V_{IN} = 0\text{V}$ | 52   | pF    |

**Notes:**

- For Max. or Min. conditions, use appropriate value specified under Electrical Characteristics for the applicable device type.
- Typical values are at  $V_{CC} = 5.0\text{V}$ ,  $T_A = 25^\circ\text{C}$  ambient and maximum loading.
- Not more than one output should be shorted at one time. Duration of the test should not exceed one second.
- Measured by the voltage drop between N and M pin at indicated current through the switch. ON resistance is determined by the lower of the voltages on the two (N,M) pins.
- This parameter is guaranteed by design.
- Where N is a pin of any port and M is a pin of any other port.

### Power Supply Characteristics

| Parameters       | Description                         | Test Conditions <sup>(1)</sup> |   | Min. | Typ. <sup>(2)</sup> | Max. | Units |
|------------------|-------------------------------------|--------------------------------|---|------|---------------------|------|-------|
|                  |                                     |                                |   |      |                     |      |       |
| I <sub>CC</sub>  | Quiescent Power Supply Current      | V <sub>CC</sub> = Max.         | V <sub>IN</sub> = OPEN or V <sub>CC</sub> |      |                     | 1.0  | mA    |
| ΔI <sub>CC</sub> | Supply Current per Input @ TTL HIGH | V <sub>CC</sub> = Max.         | V <sub>IN</sub> = 3.4V <sup>(3)</sup>     |      |                     | 2.5  | mA    |

**Notes:**

1. For Max. or Min. conditions, use appropriate value specified under Electrical Characteristics for the applicable device.
2. Typical values are at V<sub>CC</sub> = 5.0V, +25°C ambient.
3. Per TTL driven input (V<sub>IN</sub> = 3.4V, control inputs only); port A - J pins do not contribute to I<sub>CC</sub>.
4. This current applies to the control inputs only and represent the current required to switch internal capacitance at the specified frequency. The port A - J inputs generate no significant AC or DC currents as they transition. This parameter is not tested, but is guaranteed by design.

### Switching Characteristics over Operating Range

| Parameters                           | Description  | Conditions                   | PI5X1018 (Com) |      |      | Units |
|--------------------------------------|--|------------------------------|----------------|------|------|-------|
|                                      |  |                              | Min.           | Typ. | Max. |       |
| t <sub>PLH</sub><br>t <sub>PHL</sub> | Propagation Delay <sup>(2,3,4)</sup><br>N <sub>0</sub> to M <sub>0</sub> , N <sub>0</sub> to M <sub>0</sub><br>N <sub>9</sub> to M <sub>9</sub> , N <sub>9</sub> to M <sub>9</sub> | Load = C <sub>L</sub> = 20pF | —              | 1.0  | 1.25 | ns    |
| t <sub>PLH</sub><br>t <sub>PHL</sub> | Propagation Delay <sup>(2,3,5)</sup><br>N <sub>X</sub> to M <sub>X</sub> , N <sub>X</sub> to M <sub>X</sub><br>Bits 1 through 8 & 10 thru 17                                       |                              | —              | —    | 2.0  |       |
| t <sub>PZH</sub><br>t <sub>PZL</sub> | Bus Enable Time <sup>(4,5)</sup><br>S <sub>N-M</sub> to N <sub>X</sub> or M <sub>X</sub>   | See Note 1                   | 1.5            | —    | 6.0  |       |
| t <sub>PHZ</sub><br>t <sub>PLZ</sub> | Bus Enable Time <sup>(4,5)</sup><br>S <sub>N-M</sub> to N <sub>X</sub> or M <sub>X</sub>   |                              | 1.5            | —    | 5.0  |       |

**Notes:**

1. See test circuit and waveforms.
2. This parameter is guaranteed but not tested on Propagation Delays.
3. The bus switch contributes no propagational delay other than the RC delay of the ON resistance of the switch and the load capacitance. Propagational delay of the bus switch when used in a system is determined by the driving circuit on the driving side of the switch and its interaction with the load on the driven side.
4. Where N<sub>0</sub> is Bit 0 of any port N = A - J and M<sub>0</sub> is Bit 0 of any other port.
5. Where N<sub>X</sub> is Bit X (X = 0 - 17) of any port N = A - J and N<sub>X</sub> is Bit X (X = 0 - 17) of any other port.

### Test Circuits

### Switch Position

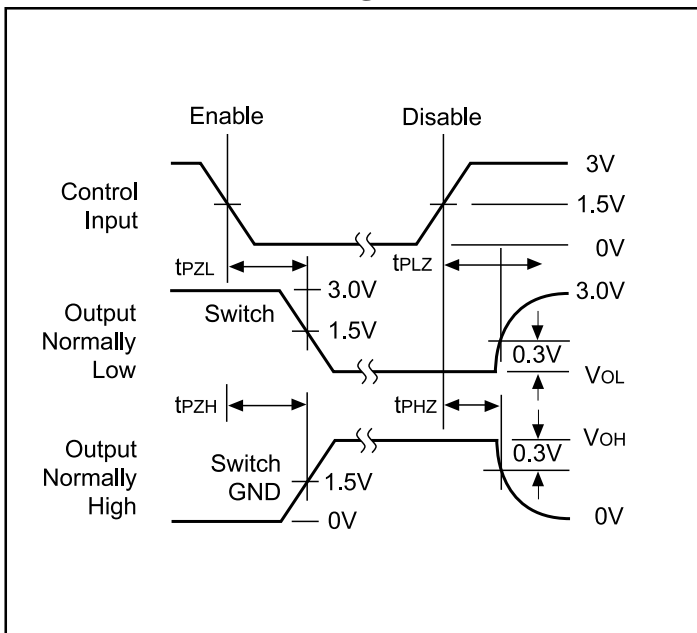

| Test                      | Switch |
|---------------------------|--------|
| Disable LOW<br>Enable LOW | Closed |
| tpd                       | Open   |

#### Definitions:

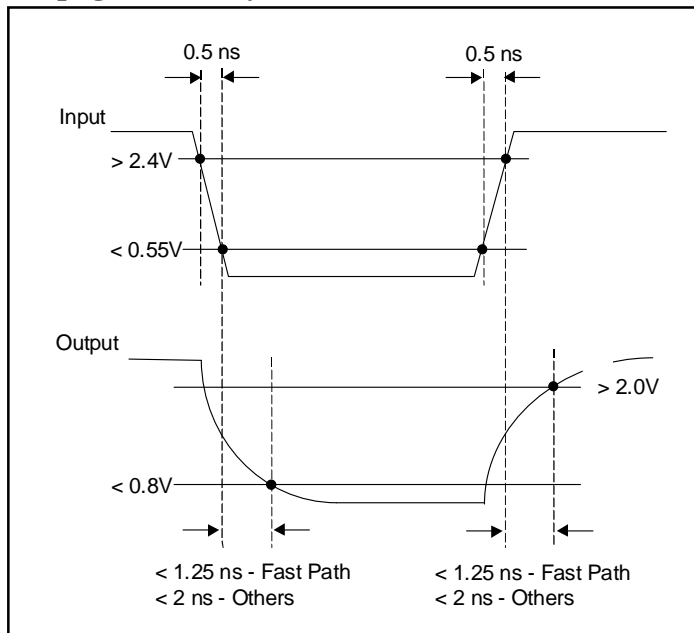

$C_L$  = Load capacitance: includes jig and probe capacitance.

$R_T$  = Termination resistance: should be equal to  $Z_{OUT}$  of the Pulse Generator

### Enable and Disable Timing

### Propagation Delay

**256-Pin Ball Grid Array Package (27 × 27mm)**

**Ordering Information**

| Part       | Pin - Package     | Dimensions  |
|------------|-------------------|-------------|
| PI5X1018NA | 256 - BGA (NA256) | 27mm x 27mm |
