## Typical Applications

## -3V CDMA/FM Cellular Systems <br> - Supports Dual-Mode AMPS/CDMA <br> - Supports Dual-Mode TACS/CDMA

- General Purpose Linear IF Amplifier
- Commercial and Consumer Systems
- Portable Battery Powered Equipment

## Product Description

The RF2617 is a complete AGC amplifier designed for the receive section of 3 V dual-mode CDMA/FM cellular applications. It is designed to amplify IF signals while providing more than 90 dB of gain control range. Noise Figure, $\mathrm{IP}_{3}$, and other specifications are designed to be compatible with the IS-95 Interim Standard for CDMA cellular communications. This circuit is designed as part of the RFMD CDMA Chip Set, consisting of a Transmit IF AGC Amp, a Transmit Upconverter, a Receive LNA/Mixer, and this Receive IF AGC Amp. The IC is manufactured on an advanced high frequency Silicon Bipolar process, and is packaged in a standard miniature 16-lead plastic SSOP package.

Optimum Technology Matching® Applied $\begin{array}{lll}\square \text { Si BJT } & \square \text { GaAs HBT } & \square \text { GaAs MESFET } \\ \square \text { Si Bi-CMOS } & \square \text { SiGe HBT } & \square \text { Si CMOS }\end{array}$

Functional Block Diagram

Package Style: SSOP-16

## Features

- Supports Dual Mode Operation
- -48 dB to +48 dB Gain Control Range
- Single 3V Power Supply
- Digitally Selectable Inputs
- -2dBm Input IP 3
- 12 MHz to 285 MHz Operation

| Parameter | Specification |  |  | Unit | Condition |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Min. | Typ. | Max. |  |  |
| Overall |  |  |  |  | $\mathrm{T}=25^{\circ} \mathrm{C}, 85 \mathrm{MHz}, \mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}, \mathrm{Z}_{\mathrm{S}}=500 \Omega$, $Z_{\mathrm{L}}=500 \Omega, 500 \Omega$ External CDMA Input Terminating Resistor, $500 \Omega$ External Output Terminating Resistor (Effective $\mathrm{Z}_{\mathrm{S}}=333 \Omega$, Effective $Z_{L}=250 \Omega$ ) (See application schematic). |
| Frequency Range |  | 12 to 285 |  | MHz |  |
| CDMA Maximum Gain | +45 | +48 |  | dB | $\mathrm{V}_{\mathrm{GC}}=2.4 \mathrm{~V}$ |
| CDMA Minimum Gain |  | -48 | -45 | dB | $\mathrm{V}_{\mathrm{GC}}=0.3 \mathrm{~V}$ |
| FM Maximum Gain | +45 | +49 |  | dB | $\mathrm{V}_{\mathrm{GC}}=2.4 \mathrm{~V}$ |
| FM Minimum Gain |  | -48 | -45 | dB | $\mathrm{V}_{\mathrm{GC}}=0.3 \mathrm{~V}$ |
| Gain Slope |  | 57 |  | dB/V | Measured in 0.5 V increments |
| Gain Control Voltage Range |  | 0 to 3 |  | $\mathrm{V}_{\mathrm{DC}}$ | Source impedance of $4.7 \mathrm{k} \Omega$ |
| Gain Control Input Impedance |  | 30 |  | $\mathrm{k} \Omega$ |  |
| Noise Figure |  | 5 | 8 | dB | At maximum gain and 85 MHz |
| Input $\mathrm{IP}_{3}$ | -44 | -40 |  | dBm | At +40 dB gain, referenced to $500 \Omega$ |
| Stability (Max VSWR) | $\begin{gathered} -4 \\ 10: 1 \end{gathered}$ | -2 |  | dBm | At minimum gain, referenced to $500 \Omega$ Spurious<-70dBm |
| IF Input |  |  |  |  |  |
| Input Impedance |  | 1 |  | $\mathrm{k} \Omega$ | CDMA, differential |
| Input Impedance |  | 850 |  | $\Omega$ | FM, single-ended |
| CDMA to FM Isolation |  | 30 |  | dB |  |
| Power Supply |  |  |  |  |  |
| Voltage |  | 2.7 to 3.3 |  | V |  |
| Current Consumption |  | 13 | 15 | mA | Minimum gain, $\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ |
| Current Consumption |  | 14 | 16 | mA | Maximum gain, $\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ |

RF2617

| Pin | Function | Description | Interface Schematic |
| :---: | :---: | :---: | :---: |
| 1 | CDMA+ | CDMA balanced input pin. This pin is internally DC-biased and should be DC-blocked if connected to a device with a DC level other than $V_{C C}$ present. A DC to connection to $\mathrm{V}_{\mathrm{CC}}$ is acceptable. For single-ended input operation, one pin is used as an input and the other CDMA input is AC-coupled to ground. The balanced input impedance is $1 \mathrm{k} \Omega$, while the single-ended input impedance is $500 \Omega$. |  |
| 2 | CDMA- | Same as pin 2, except complementary input. | See pin 1. |
| 3 | GND | Ground connection. For best performance, keep traces physically short and connect immediately to ground plane. |  |
| 4 | FM+ | FM balanced input pin. This pin is internally DC-biased and should be DC-blocked if connected to a device with DC present. For single-ended input operation, one pin is used as an input and the other FM input is AC-coupled to ground. The balanced input impedance is $1.7 \mathrm{k} \Omega$, while the single-ended input impedance is $850 \Omega$. |  |
| 5 | FM- | Same as pin 4, except complementary input. | See pin 4. |
| 6 | GND | Same as pin 3. |  |
| 7 | IN SELECT | Selects which IF input (CDMA or FM) is used. This is a digitally controlled input. A logic "high" selects the CDMA input amplifier. A logic "low" selects the FM input amplifier. The threshold voltage is approximately 1.3 V . |  |
| 8 | NC | No connection pin. This pin is internally biased and should not be connected to any external circuitry, including ground or $\mathrm{V}_{\mathrm{CC}}$. |  |
| 9 | OUT- | Balanced output pin. This is an open-collector output, designed to operate into a $250 \Omega$ balanced load. The load sets the operating impedance, but an external choke or matching inductor to $\mathrm{V}_{\mathrm{CC}}$ must also be supplied in order to correctly bias this output. This bias inductor is typically incorporated in the matching network between the output and next stage. Because this pin is biased to $\mathrm{V}_{\mathrm{CC}}$, a DC-blocking capacitor must be used if the next stage's input has a DC path to ground. | $\text { OUT }+\mathrm{O}$ |
| 10 | OUT+ | Same as pin 9, except complementary output. | See pin 9. |
| 11 | GND | Same as pin 3. |  |
| 12 | GND | Same as pin 3. |  |
| 13 | VCC | Supply Voltage pin. External bypassing is required. The trace length between the pin and the bypass capacitors should be minimized. The ground side of the bypass capacitors should connect immediately to ground plane. |  |
| 14 | VCC | Same as pin 13. |  |
| 15 | VCC | Same as pin 13. |  |
| 16 | GC | Analog gain adjustment for all amplifiers. Valid control ranges are from 0 V to 3.0 V . Maximum gain is selected with 3.0 V . Minimum gain is selected with 0 V . These voltages are only valid for a $4.7 \mathrm{k} \Omega$ DC source impedance. |  |
