## Typical Applications

## -3V CDMA/FM Cellular Systems

- 3V CDMA PCS Systems
-3V TDMA Cellular/PCS Systems
- Supports Dual-Mode AMPS/CDMA
- Supports Dual-Mode TACS/CDMA
- Portable Battery-Powered Equipment

## Product Description

The RF2629 is a complete AGC amplifier designed for the transmit section of 3 V dual-mode CDMA/FM cellular and PCS applications. It is designed to amplify IF signals while providing more than 84 dB of gain control range. Noise Figure, IP3, and other specifications are designed for CDMA and dual mode CDMA/AMPS handsets. This circuit is designed as part of the RFMD CDMA Chip Set, consisting of this Transmit IF AGC Amp, a Transmit Upconverter, a Receive LNA/Mixer, and a Receive IF AGC Amp. The IC is manufactured on an advanced high frequency Silicon Bipolar process and is packaged in a standard miniature 8-lead plastic MSOP package.

## Features

- Supports Dual Mode Operation
- Supports PCS and Cellular Applications
- Single 3V Power Supply
- 12 MHz to 175 MHz Operation
- Miniature Surface Mount Package

| Pin | Function | Description | Interface Schematic |
| :---: | :---: | :--- | :--- | :--- |
| $\mathbf{1}$ | IN+ | Balanced input pin. This pin is internally DC-biased and should be DC <br> blocked if connected to a device with a DC level, other than $V_{C C}$, <br> present. A DC to connection to $V_{C C}$ is acceptable. For single-ended <br> input operation, one pin is used as an input and the other input is AC- <br> coupled to ground. The balanced input impedance is $1 \mathrm{k} \Omega$, while the <br> single-ended input impedance is $500 \Omega$. |  |
| $\mathbf{2}$ | IN- | Same as pin 2, except complementary input. |  |
