

8A, 400V - 600V Hyperfast Dual Diodes

The RHRP840CC and RHRP860CC are hyperfast dual diodes with soft recovery characteristics ($t_{rr} < 30ns$). They have half the recovery time of ultrafast diodes and are of silicon nitride passivated ion-implanted epitaxial planar construction.

These devices are intended for use as freewheeling/clamping diodes and rectifiers in a variety of switching power supplies and other power switching applications. Their low stored charge and hyperfast soft recovery minimize ringing and electrical noise in many power switching circuits, thus reducing power loss in the switching transistors.

Formerly development type TA49059.
