**USING ONLY THE MUTE FUNCTION**

To simplify the application, the stand-by pin can be connected directly to Ground. During the ON/OFF transitions it is recommended to respect the following conditions:

- At the turn-on the transition mute to play must be made when the SVR pin is higher than 2.5V
- At the turn-off the TDA7496SSA must be brought to mute from the play condition when the SVR pin is higher than 2.5V.

HEAT SINK DIMENSIONING:

In order to avoid the thermal protection intervention, that is placed approximatively at $T_j = 150^\circ\text{C}$, it is important the dimensioning of the Heat Sinker R_{Th} ($^\circ\text{C}/\text{W}$).

The parameters that influence the dimensioning are:

- Maximum dissipated power for the device (P_{dmax})
- Max thermal resistance Junction to case ($R_{Th\ j-c}$)
- Max. ambient temperature $T_{amb\ max}$
- Quiescent current I_q (mA)

Example:

$V_{CC} = 22\text{V}$, $R_{load} = 80\text{ohm}$, $R_{Th\ j-c} = 5\ ^\circ\text{C}/\text{W}$, $T_{amb\ max} = 50^\circ\text{C}$

$$P_{dmax} = (N^\circ \text{ channels}) \cdot \frac{V_{cc}^2}{2\pi^2 \cdot R_{load}} + I_q \cdot V_{cc}$$

$P_{dmax} = 2 \cdot (3.0) + 0.5 = 6.5\ \text{W}$

(Heat Sinker) $R_{Th\ c-a} = \frac{150 - T_{amb\ max}}{P_{d\ max}} - R_{Th\ j-c} = \frac{150 - 50}{6.5} - 5.0 = 10^\circ\text{C}/\text{W}$

In figure 21 is shown the Power derating curve for the device.

Clipwatt Assembling Suggestions

The suggested mounting method of Clipwatt on external heat sink, requires the use of a clip placed as much as possible in the plastic body center, as indicated in the example of figure 22.

A thermal grease can be used in order to reduce the additional thermal resistance of the contact between package and heatsink.

A pressing force of 7 - 10 Kg gives a good contact and the clip must be designed in order to avoid a maximum contact pressure of 15 Kg/mm² between it and the plastic body case.

As example, if a 15Kg force is applied by the clip on the package, the clip must have a contact area of 1mm² at least.
