VPH03

FBET Hybrid IC
Video Pack (VPH Series)
Video Output Amplifiers
For High-Definition TV

Overview

The VPH03 is Video Output Amplifier for a High-Definition TV integrates a complete amplifier using high-precision FBET and LSBT transistor chips into a single IC, allowing very high-output voltage, wide-bandwidth video output amplifier circuits to be implemented with greatly reduced parts count.

The result is that cost reduction and saving board space can be realized. VPH03's 9-pin metal SIP package also minimizes EMI problems and simplifies circuit board design.

The 30MHz bandwidth makes the VPH03 ideally suited for use with 32kHz line frequency HDTV. A supply voltage of 150V is typical.

The VPH03 is one of the devices in a series of Sanyo's IC that cover the complete range of video output amplifier applications - - from next generation HDTV to externally high resolution TV.

Evaluation samples are available in the near future.

For EDTV/ATV/MAC projection applications, refer to the VPH01 Video Output Amplifier system data sheets, and HDTV & graphics projection oriented use applications is VPH05 Video Output Amplifier.
